Don't drop the pace

Improve the productivity
of your incoming mail with the
RED72 automated mail opening
system from Pitney Bowes

Pitney Bowes

RED72: mail opening system for rapid content extraction

The RED72 Rapid Extraction Desk combines innovative technology with ergonomic design. It ensures that each operator works more efficiently making your incoming mail operation more productive.

The circulation of incoming mail is vital to the efficient running of any business. The Pitney Bowes RED72 Rapid Extraction Desk allows you to distribute high volumes of incoming mail quickly and accurately.

Eliminate damaged mail
The RED72 gives you the choice of opening one or two sides of the envelope. In addition, there are three cut options – top edge only, top and side edges or a custom setting depending on the format and thickness of the envelope. This gives you the flexibility to deal with practically any mailpiece.
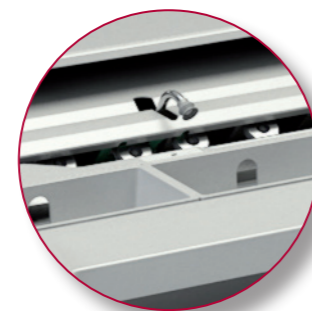

Improve productivity
Once the cuts have been made, envelopes are presented to the operator at an ideal angle for visibility and extraction into one of the trays that are offered with the system. With a large feed capacity and speeds of up to 4,500 items per hour, the RED72 will ensure that you can meet even the most demanding service level agreement.
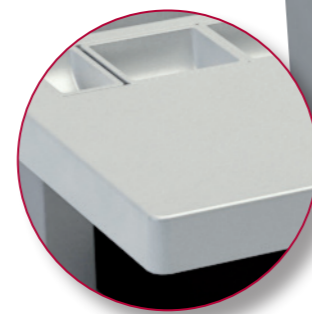

Monitor performance
Through the intuitive microprocessor, the RED72 allows you to programme multiple operators and jobs to monitor individual output and productivity. Shift productivity reports can be produced through the optional printer to monitor performance levels.

Ensure your operators are at ease
The RED72 is offered with an optional adjustable height work surface, which adjusts easily to provide an optimal working area for the height of your operator. The ergonomic design means that jams can be easily cleared from a comfortable seated position.
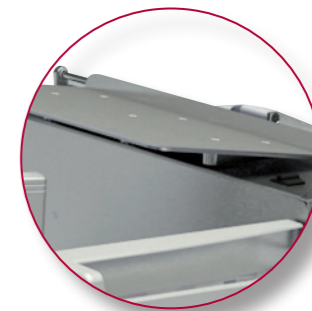

3 Each envelope is 'pulled' onto the transport and fed into the cutting mechanisms for 1 or 2-sided opening

2 Mail, which may include mixed sizes, is inserted into the feed tray

4 The envelope is delivered to the operator positioned at an ideal angle and opened wide for easy extraction of contents

**1** Set up operator and job details

5 The chosen envelope activation mode checks the envelope as the contents are removed and sorted

7 The performance control centre counts envelopes processed and records operator and job data

6 A second check of the envelope contents is performed. If the envelope is not empty, a warning light alerts the operator. When an empty envelope is identified, it is automatically transported and dropped into a bin

Specifications

Physical Specifications

Speed	4,500 pieces/hour
Length	1585 mm
Depth	1204 mm
Height	1341 mm
Operator/service clearance	610 mm
Electrical	220/240 VAC, 50Hz
Feed tray capacity	559 mm

Envelope Specifications

Height	76-152 mm
Length	102-254 mm
Minimum paper weight	25 mm
