

## Shipping

PitneyTrack™ Enterprise

The technology behind  
every important delivery.

# Manage inbound packages and mail with all-around efficiency and visibility.

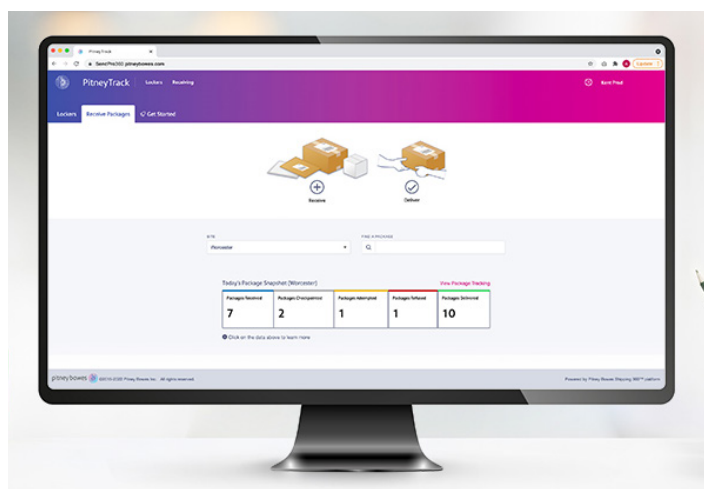

Receive, track and deliver packages across your organization with accuracy and ease.

Managing incoming packages across large campuses, multi-tenant buildings, or multiple geographic locations can be a logistical challenge. The risks are clear—lost or delayed deliveries can damage customer and supplier relationships, compromise service-level agreements, or impact the overall recipient experience.

PitneyTrack Enterprise is a cloud-based solution that streamlines the logging, tracking and managing of incoming packages and important mail. PitneyTrack makes it easy to monitor and control the flow of parcels throughout your organization, across multiple locations – and in real-time.

With a simple scan of a package barcode, the inbound item details are automatically uploaded into the software. Track packages, envelopes, critical documents or even assets - anything you can put a barcode on. From then on you have complete visibility into the full chain of custody, as well as:

- What was received and when, including its condition.
- Identity of both sender and intended recipient.
- Location status within your organization.
- When the item reached its intended recipient.
- Delivery confirmation

Gain a comprehensive view of your  
receiving activity.

PitneyTrack features an actionable dashboard that summarizes the status of packages by day and location. It consolidates data in an easy-to-read format, helping you make smarter decisions. You can also view detailed information with customizable reports.

Gain additional data and insights for your inbound packages with PitneyAnalytics™, on the shared Shipping 360® platform.

# Enterprise-wide management for improved processes.

## Multi-location management

Centralize the management and tracking of inbound packages across various locations and users by customizing workflows, location specific address books and notifications.

## Optimize your delivery routes

Ensure timely internal package deliveries by creating and managing local delivery routes for each location, including stop scheduling, time windows, and detailed reporting.

## Advanced visibility into scheduled deliveries

Streamline inbound package management and optimize resource allocation by importing a digest of incoming packages from each carrier scheduled for delivery. This package data, including carrier, sender, recipient, and more — is automatically captured and imported into your system once the package is received and scanned.

## Complete visibility into a package's entire journey

Together with our shipping software, PitneyShip® Enterprise outbound package tracking, this feature offers a comprehensive view for both inbound and outbound, tracking packages across multiple carriers, locations, and users within your organization.\*

\* Optional feature for PitneyShip Enterprise users

## Add 24/7 secure package pickup with ParcelPoint® Smart Lockers.

Take inbound tracking, receiving and delivery a step further with ParcelPoint Smart Lockers, a contactless and convenient package pick-up experience — PitneyTrack Inbound seamlessly integrates with ParcelPoint Smart lockers creating an easy-to-use solution that delivers full chain of custody and end-to-end visibility.
