SendPro® P3000

Set a new standard for performance.

Make critical gains in productivity and efficiency.

Shipping packages and sending daily Lettermail™ are a necessary part of doing business. Yet, these seemingly simple tasks can quickly become very complicated processes. For whatever you send, costs, delivery dates and carrier guidelines can all be confusing. Streamlining your office workflow means having the right tools in place.

Simplify your shipping and mailing process with the SendPro P3000. The P3000 integrates your mailing, shipping and receiving processes into a single system. The P3000 will seal and print postage for your domestic and international LetterMail automatically and process standard and oversize mail up to 3/4" thick at up to 310 letters per minute. With the Weigh-on-the-Way™ feature, the P3000 can process a stack of mixed size and mixed weight mail up to 205 letters per minute.

Ship with your choice of carrier.

For sending packages, you can choose from several available carriers including Canada Post. Simply select your carrier and service levels, then use the integrated scale and label printer to complete the shipment. The SendPro P3000 communicates directly to each carrier to give you preferred options from each carrier. Having multiple carriers available on one platform enables you to control costs while streamlining workflow.

The P3000 also has an integrated receiving application where you can accurately log inbound deliveries. Simply scan any package barcode delivered by any carrier. This simple scan gives you a permanent record of every package delivered to your office.

Simple user display

The modern, colour touch screen display of the P3000 enables the user to pick the ideal mailing or shipping service and complete each job quickly and accurately. The system guides the user with its easy-to-follow menus for processing mail with Canada Post and parcels for all your available carriers.

Flexible printing

The P3000 also gives you unique control over envelope printing. From any desktop PC, you can upload your graphics to print a business logo, return address, or promotional message in full colour on outbound envelopes. Print just one or print a thousand. The savings add up. Its quick changeover gives you printing flexibility and can eliminate the premiums you pay for special envelope stock.

Manage inbound deliveries.

With an integrated barcode scanner, the P3000 helps you automate and streamline the receipt of incoming packages. The P3000 instantly logs package information including carrier, recipient, sender, tracking number, time and receipt date. You also have the option to automatically alert the intended recipient with email notifications, making the entire process more accurate and efficient.

Desktop shipping

In addition to shipping right from the P3000, you can also ship packages from any computer. Assigned office workers can simply log in from their desktop PC and access all of the same shipping features on the P3000. You can equip any number of these users with a small scale and label printer to ensure accurate weighing and professional label printing. Plus, everything shipped is captured in a central shipping account that includes package detail, tracking information and shipping history.

Specifications
