pbSecure™

The solution for Secured Certification Issuance

# Create documents with secure data.

Educational organisations like universities, colleges, exam boards and schools deal with large volumes of data and issue many certificates, marksheets, admission cards and HR documents. With our background in Secure Evidencing, we developed a ground-breaking Secure Certificate Issuance System. Not only are the documents secure, but also modifications can be easily detected and reported. What's more, we know that internet connectivity is not always available, so we developed the system to work both on and offline.

For more information please call 1800110198

Looking after data, looking after you.

- Student data is protected
- Manual verification is reduced
- Reputation and credibility are protected

Put student data first.

Data and certificates are secure, certificates can be verified on and offline or via mobile, users can revoke or issue duplicates and see previous issues. Users can create certificates in multiple languages and we can even make the system compatible with legacy university systems. Security and flexibility come as standard.

## Technology for everyone.

pbSecure offers many other benefits for all kinds of users.

### For institutions.

- Market-leading technology to secure certificates and mark sheets.
- Reduced overheads for verification.
- Simple monetisation of reissue and verification of certificates.
- Proactive prevention of fake degrees.
- Regulation of the number of certificates issued.

### For students.

- Access to online verification and multi-lingual certificates.
- The ability to submit copies of original degree for verification.
- The flexibility to carry certificates and mark sheets in multiple formats.
- Verification when on or offline.

### For employers.

- Instant verification.
- Verification when on or offline.
- Better results without upfront investment.

*The traditional methods of using holograms, threads and inks on paper were not enough for this organisation. They wanted to secure the information on the certificates. They also wanted to secure their affiliates such as training partners and specific industry skills organisations. With pbSecure, they have been able to do all this and more.*

### – National vocational training organisation.

- Focus on information security in existing processes.
- Create an automated instant verification mechanism.
- Reduce dependence on vendors to generate and print physical security features.
- Verify quickly and efficiently.
- Create in-house ability to secure data from tampering when in the database.
- Create a master database to allow online verification for all students.
- Enable data capture across all partners.
