Service Works™ Solutions

Parts Cabinet Programme

Built to fit

You can't afford production downtime because the right part isn't readily available to keep your machine running. Pitney Bowes' experts can be there to help keep your inventory stocked and ready for you. The Parts Cabinet Programme is a parts purchase plan designed to help you accurately and efficiently maintain your spare parts inventory.

A Pitney Bowes customer service technician will create and customize a spare parts cabinet specifically designed to meet your business needs.

We can help you make the right inventory decisions to minimise downtime and increase productivity.

Take control

Have what you need when you need it. Pitney Bowes' experts will acquire, organise, and replenish important spare parts inventory at your site. This includes an initial stocking of your spare parts cabinet and periodic cabinet reviews at no extra cost to you.

Part assurance

Pitney Bowes use broad industry experience to help ensure that the right parts in the correct quantities are available when you need them. Your stocking profile is set to reflect your inventory requirements. We will make recommendations based on part availability as well as your parts usage and production volume.

Expert advice

Regular return visits from our experts help maintain appropriate stock levels necessary for your operation by suggesting modifications resulting from your changing business needs. We also provide suggestions and reminders about reorder and quantity.

Self-service discount

This program offers a significant initial discount to our self-service customers. From ordering to stocking, Pitney Bowes has you covered.
