

Get connected to stay connected.

Avoid disruptions to your mail operations.
Switch your franking machine to a digital internet connection today.

With telecommunication companies moving away from analogue phone lines, you'll need to connect your Pitney Bowes franking machine via an internet connection (e.g. ethernet cable). This will help avoid any disruptions in your business operations. If you continue to connect your meter via a phone line, you'll be unable to reach our servers once analogue phone services are discontinued. Pitney Bowes franking machine connected via an internet connection can refill postage and download the latest Royal Mail postal rates with greater ease after analogue phone services are discontinued.

Here's how you'll benefit when you upgrade to a digital internet connection.

- Avoid any possible disruptions to your business operations.
- Save money by eliminating the need for a dedicated analogue phone line.
- Enjoy a far more reliable connection than with an analogue connection.
- Take advantage of faster transmissions for Royal Mail postal rate updates, software updates and refilling postage.

For more information, visit us online: pitneybowes.com/uk/connect

Connect digitally in two simple steps:

01. Locate your digital connectivity adaptor for the ethernet connection that came with your machine .*
02. Then, watch a short video or download a manual on how to install your connectivity kit.

* Depending on the franking machine type and its likely age, a digital connectivity adaptor was included with your franking machine. All new machines now include an ethernet adaptor.

Connection options by meter

	K700/K7M0 "mailstation2"	DM100i/ DM200L	DM125/ DM225	DM300C/ DM400C	DM475	DM500-1100
Preferred connectivity option	Ethernet	PC Meter Connect (PCMC)	Ethernet	Ethernet	Ethernet	Ethernet
