

SendPro™ P Series

Simplify your inbound package management.

Eliminate manual processes.

Packages arrive every day at your office. Manual logging of these deliveries takes time and relies heavily on everyone following a proper procedure. Without a quick and accurate way to manage tracking of these inbound deliveries, the search for a package can be disruptive to your daily operations.

Streamline your inbound package receiving process with the integrated receiving application on your SendPro P Series system. Now, getting all inbound deliveries information recorded accurately is simpler than ever.

Automate package receiving.

With the new SendPro P Series, you always have an accurate history of every package that comes into your organisation. Scan the barcode on the package to record the carrier's tracking number, recipient and sender data into the integrated software application. The SendPro P Series keeps a history report of all your important incoming deliveries, letting you know when each package was received.

With the email notification feature, recipients are automatically notified once a package is delivered for them. This saves everyone time and reduces mail room inquiries regarding a delivery status.

For more information, visit us online: pitneybowes.com/uk

Save up to 30 minutes by removing the need to manually record the receipt of incoming packages. Most customers are visited by carriers two to three times daily. On average, they enjoy a total daily time saving of up to 75 minutes.

Packages	SendPro Receiving: with Notification
Scan and record receipt of inbound packages	Yes
