RISO ComColor® FW Series Printers

Increase the speed and impact of your communications.

Keep your print and mail moving.

Your business depends on sending transactional documents, like bills and statements, to your customers. Meet your deadlines and accelerate your printing processes with the RISO ComColor® FW inkjet printer.

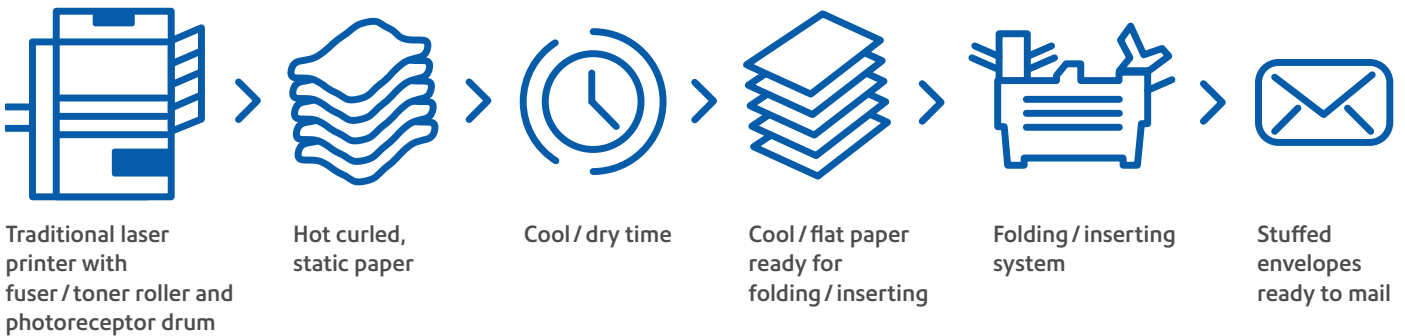

Improving uptime has never been cooler.

Older print technologies, like toner-based copiers and printers, use heat to print. This creates static and causes paper to curl, causing jams and other maintenance issues that delay your workflow. More time is wasted waiting for printed pages to cool down before using your folding and inserting systems, all of which prevents important communications from reaching customers on time, especially during high-volume print runs.

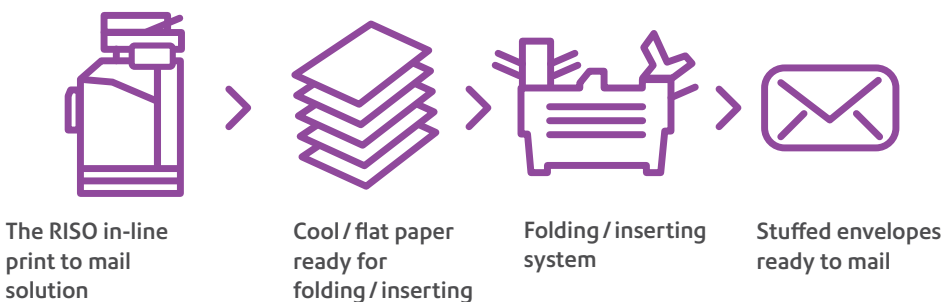

The RISO ComColor FW prints your documents reliably using heatless inkjet printing, so you can fold and insert your mail without delays. It uses innovative inkjet technology coupled with a simple straight paper path. Paper is printed cold, fast, and flat for continuous operation and maximised uptime in your full print-to-mail process.

Accelerate your print to mail process

Traditional laser printing

RISO ComColor FW Series

Add more value to your communications while staying within your budget.

Print faster and more reliably.

The ComColor® FW Series helps ensure your mail is no longer waiting on your copier. With processing speeds of up to 120ppm, the ComColor FW Series prints your documents quickly, without slowing down for duplex or colour printing. Now, even the highest volume production printing needs can be handled fast and reliably.

Improve your communications with colour.

Boost customer engagement.

Most of your customer interactions—your website, mobile app and email—are in full colour. Yet, your printed communications continue to lag behind in black and white. Have a more productive conversation with customers with full colour. Use colour to highlight special announcements, call out new features or emphasise relevant offers. Plus, by leveraging the high open-rate of transactional communications, your audience is more likely to respond to offers. Most importantly, colour allows you to give your customers consistent branding and messaging across physical and digital touch-points.

Colour output with black and white costs.

Typical businesses have perceived colour as being too expensive and too slow. It's not any more. Now, you can add the value of colour to your communications without decreasing profitability. The ComColor® FW prints full colour transactional documents faster—and for much less—than your current copiers. Its inkjet technology adds the engaging colour that your customers want for a similar cost to black and white print without any reduction in rated speeds.

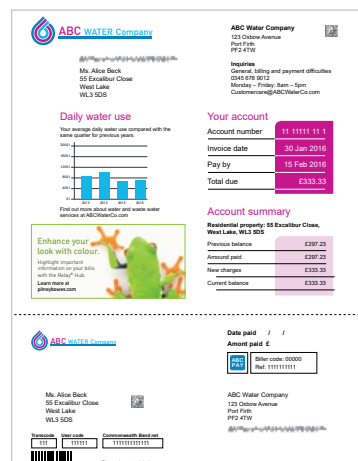

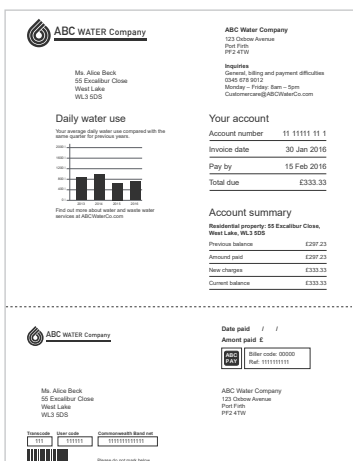

Improve customer satisfaction

According to InfoTrends¹, 38% of consumers want colour to emphasise important information on the communications you send. Making your documents easier to understand helps customers quickly identify the information you want them to know, thus improving customer satisfaction.

Double response

by adding revenue generating cross-sell offers to the statement².

Optional accessories to customise your workflow.

The ComColor® FW Series offers flexible options to suit your print finishing and management needs.

Face Down Finisher F10

Compact finisher exclusively for offset stacking and stapling finished prints.

Scanner HS7000

The auto feeder enables copying and scanning of duplex originals of up to 200 sheets¹ at a time. Output formats include PDF, TIFF, JPEG and PDF/A.

Multifunction Finisher FG10

Intelligent inline functions performed automatically simplify the finishing process.

RISO Auto-Control Stacking Tray II

The paper guides automatically open to the correct width to match the paper in use.

Wide Stacking Tray

Wider paper can be printed and stacked in a wider tray to match the paper in use.
