Solutions Engineering & Delivery | Adoption and Education

Production data, analytics and insight accelerate results.

Improve business results by harnessing your production data.

Our experts can help you to quantify and improve performance across your complex transactional print and mail workflow.
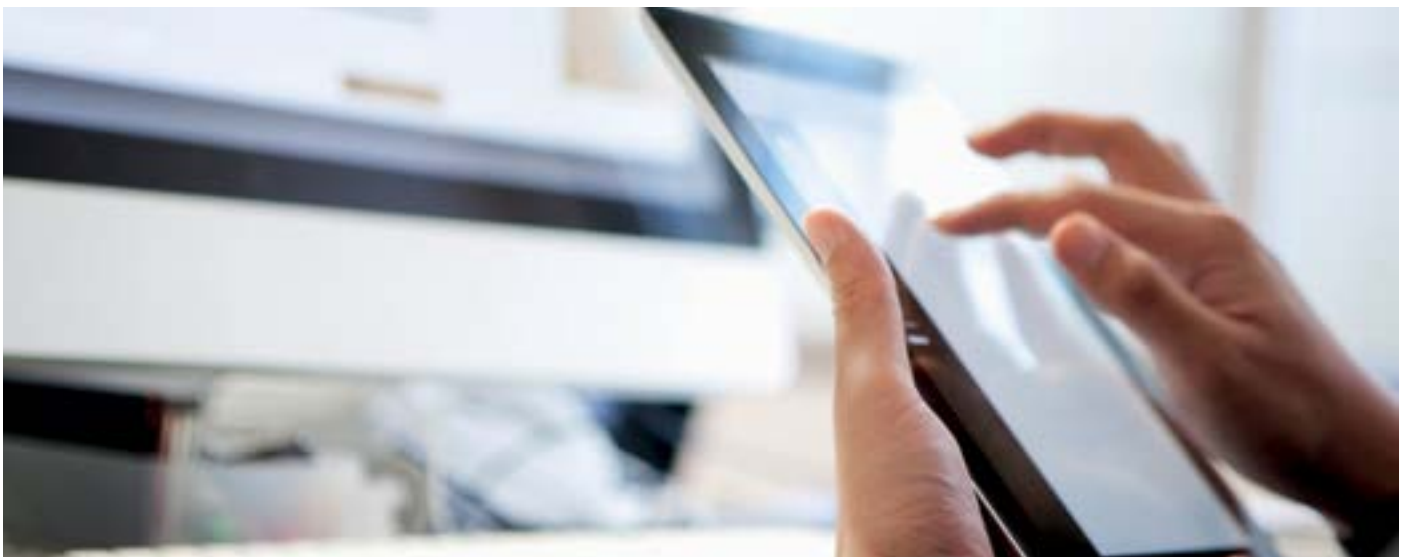

Your operational data—combined with our expertise and innovative Clarity™ and DirectView™ solutions—can help you turn real-time data into actionable insight to optimise performance and outcomes.

Take actions that address your unique challenges.

Our skilled engineers and analysts—highly experienced in production mail processes and technology—help you make more informed business decisions and implement business practices that benefit your bottom line.

We can help you:
- Capture all relevant data and analytics from your transactional print and mail operation.
- Identify potential improvements in processes and ways to optimise the performance of your business.
- Create data-driven plans based specifically on your environment and desired business outcomes.

For more information, visit us online: pitneybowes.com/uk/solutions-engineering

Our strength is in our people.

Our team of highly skilled production print and mail professionals can help your business optimise results based on its unique operational needs. We can help you realise and gain potential productivity improvements based upon relevant performance data available through our Industrial Internet solutions.

Data is as unique as your business.

The insight gained through using production data identify variances by operator, platform, changeover time and application.

Once the insight is properly gleaned, the ideal improvement goals can be defined and deployed in order to improve and measure outcomes.

Our solutions help you achieve success.

Benefit from the power of the Industrial Internet using production data and analytics available through our innovatve and powerful tools including:

DirectView™:
Monitor production operations performance in real time. This on-premises software suite provides clients with time critical information for print and mail operations to monitor work cell productivity, maintain optimal performance and attain operational goals.

Clarity™:
Our complete suite can help your print and mail operations maximise output and minimise downtime by using machine sensor data tied to the Industrial Internet. With it, you can improve productivity and reduce operational costs by predicting and resolving equipment and operator issues.

Create better business outcomes.

Our experts can help your team continuously improve your bottom line with outcome-based results that turn data into action.

We can help you:
- Intelligently manage and monitor technology, people and process to continuously improve performance.
- Analyse your end-to-end workflow to identify opportunities for greater optimisation.
- Design and implement an operational plan to improve productivity, quality, costs and delivery performance.
- Enable improvements in operator and process efficiencies, higher levels of productivity, less employee turnover and higher quality output.
- Reveal performance improvement potential across quality controls, SLA attainment and lower processing costs.

We're here to help.
