

Dynamic solutions for a transforming market

Automated parcel sorting

The rapid growth of e-commerce and the associated rise in parcel shipments has required postal and commercial mail and parcel handlers across the globe to evaluate their services and capabilities. Pitney Bowes has leveraged the company's deep expertise in mail creation, sorting, and shipping in order to bring the latest hardware and software innovations to the package and parcel market.

Pitney Bowes provides solutions that help clients:

- Keep pace with the increase in parcel shipments
- Automate manual tasks
- Honor service level agreements
- Implement new value-add services

Solutions for now – and for the future

Forward-thinking mail and parcel couriers are taking a hard look at their entire mail processing workflow and are seeking ways to increase efficiency, reduce costs, and meet their client's service levels, particularly with regard to parcel handling. Drawing from a 90 year legacy of innovation, Pitney Bowes is developing solutions that help identify and address our client's current challenges as well as position them for success in the future.

Bringing it in

Whether parcels come to the sorter in sacks or cartons, singular or in bulk, Pitney Bowes will tailor a solution to suit any induction scenario. Our best-in-class image capture, lighting and software technology will read addresses, 1D and 2D barcodes with the highest accuracy in the industry.

Moving it along

In-line weighing and 3D measurement options are available for all weigh on-the-fly, dimensioning and certification needs. Depending on the size, type and fragility of the parcels, a variety of automatic printing and labeling solutions can be integrated into a sorting system.

Sorting it out

Throughput and material handling requirements vary widely for parcel sorting systems. As there is no technology that can be universally applied, Pitney Bowes offers an extensive range of integrated diversion systems. From Cross Belt, Narrow Belt and Tilt Tray systems, to Pusher, Sweeper, Bombay and Shoe sorting, Pitney Bowes will consult with you to deliver a solution that fits your space, application and budget.

Software sophistication

One feature remains constant throughout all of Pitney Bowes' sorting solutions, the full functionality and flexibility of our Business Logic Processing (BLP) software. Developed from deep experience in mail sortation, our systems are designed to enhance operational workflow and direct data communications. Clients across the globe have come to trust and rely on our software for the precise interface into mission critical billing and database applications.

Pitney Bowes' BLP software delivers:

- Consistent interface across Pitney Bowes sorter products
- Seamless integration into critical business applications
- Optimum flexibility for current and future business needs
- A mature and industry tested platform

Client centric - One size fits none

In the real world there is no "standard" client environment. Pitney Bowes is proud to offer powerful and flexible sorting solutions for a wide variety of document and parcel materials and volumes. We are experts in the deployment of all types of sorting systems, software and controls that enhance our client's operations. Our goal is to understand your requirements, key critical issues, and to collaborate towards a solution that will enable you to meet your near-term and long-term business objectives.

This is a true partnership approach to development, with clients involved at every stage – from reviewing concepts, requirements, operational input and budget, to the delivery of the solution with operational flexibility and scalability in mind.

At Pitney Bowes, the client is central to everything we do.
