Mailing
Folder Inserters

Relay® Integrity Pro

Get the right documents to the right clients. Right now.

Take control of every page with the click of a button.

Save time

This innovative software seamlessly integrates with your Pitney Bowes Relay Series machines, enabling you to automate folding and inserting mail processes for documents with varying numbers of pages. You can even send to multiple machines at once.
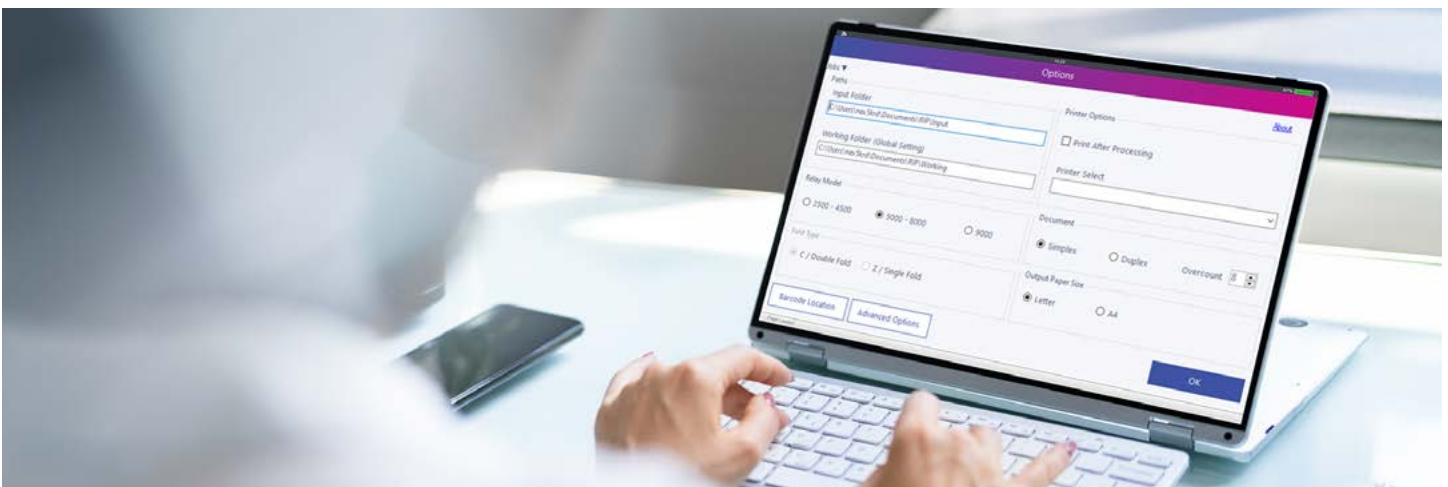

Control costs

Relay Integrity Pro provides a cost-effective, quick turnaround option, even when you have a limited budget or a short window to get up and running. Once in place, you continue to save. Integration with our postal coding plug-in enables you to take advantage of postal coding and presort, which provide even greater savings. In addition, with the capabilities of grouping, you can combine multiple documents for the same recipient into a single mailing, which further reduces your postage spend.

Reduce risk

With increased regulatory compliance, document integrity is more critical than ever. Relay Integrity Pro adds intelligence to your folder inserter to keep customer data secure by ensuring the right documents go to the right customer. Optional file-based processing support adds an extra layer of precision, while also enabling you to track and report the progress of mailpieces.

Contact your Pitney Bowes sales or service representative for more information.

Gain even more value and efficiency from your Relay Inserter with our cost-effective software.

Relay Integrity Pro levels up your Relay Inserter system by pairing with the standard 2D barcodes supported by the folder inserter. The software applies these barcodes to print ready PDFs in batch or individual files to ensure correct documents go into the correct envelopes when sent to the Relay Inserter system.

2D barcodes add accuracy and precision.

Relay® Integrity Pro makes it simple to add 2D barcodes to your print-ready PDFs. Your folder inserter reads the barcodes to automatically assemble your variable page documents into the right envelopes. The easy-to-use software supports file-based processing to take it a step further, adding an extra layer of security and accuracy to

deliver the highest level of document integrity. This is done by creating a digital reference file to ensure the right pages go to the right customer. In addition, integration with our postal coding plug-in reduces undeliverable mail, ensures mail reaches the right person at the right address, reduces postage costs and helps improve Day Sales Outstanding (DSO) for bills.

Enjoy the confidence of a secure, on-premise solution.

If you work with sensitive data that you prefer not to have in the cloud, Relay Integrity Pro is ideal. All information is hosted on-site, which gives you even greater control over your mailings and the information they contain. This is especially valuable for industries such as hospitals, banks and security-oriented organizations, that may be targets for data breaches. On-premise installation gives you the peace of mind that customer data is secure and risk has been minimized.

Upgrade to even more security and convenience.
