

BOMB BLANKET & SAFETY CIRCLE

The Todd Research Bomb Blanket & Bomb Circle minimises the impact of explosive devices in mailrooms or public spaces. The Bomb Circle is placed around the hazard, with the Bomb Blanket positioned over the circle. This eliminates the risk of direct contact, while providing an area of confinement from which the device can be examined and safely disposed of.

A fully flexible bomb blanket designed to the highest technical specification commensurate with minimising and containing the fragments of a 0.5 kg explosive charge.

Bomb Blanket (specifications)

Dimensions – 1.4m x 1.4m

V50 of 400m/s for 17 grain fragment

Four handling straps

Clear Label – Black on Red “**BOMB BLANKET**”

Safety Circle (specifications)

2m long to form 0.5m x 0.6m diameter circle (Velcro Fastening) x 0.4m deep

Lightweight semi rigid, to support the weight of the blanket (no Kevlar)

Clear Label – Black on Red “**SAFETY CIRCLE**”
