

The World's Most Portable Full Body Scanner

Discreet, mobile and effective, the TR360's patented core technology platform is the most portable full body scan system available worldwide. Suitable for environments with limited space, or security operations in remote or temporary locations, the TR360's unique structure represents a genuine breakthrough in scanning technology. The unit is also available as a wall mounted panel discreetly positioned to provide a high level security solution in environments such as hotels, offices access control points, prisons and police containment areas.

The technology, based on ferromagnetic detection can be thought of as ferrous only metal detection. The large majority of items of interest e.g. knives, cell phones, guns etc., contain significant amounts of ferrous material.

The technology is entirely passive and so presents no health and safety issues to any subject being scanned. The **TR360** product has been designed to be simple to set up, operate and intuitive to work with.

Safe, Discreet and Non-Intrusive Security Screening

The **TR360** is perfect for scanning large numbers of individuals at a wide range of events and occasions e.g. public buildings, public events, licensed premises and schools. Its portability, ease of use and reliability provides control and flexibility whatever the venue.

It can be used indoors and outdoors and can be set up by one person in less than a minute and is powered either by battery or mains. It does not require level ground and will operate on any static surface.

Highly Effective Search Systems

The unit can be quickly removed and stored in a robust carry case to be transported to the next search site ready for use. Although portable the unit is perfectly at home in a permanent location and mains powered if required.

The **TR360** is a discreet, non intrusive system that is completely without health and safety concerns; it is a passive system which does not affect pacemakers or medical implants.

Why the TR360 is right for your application.....

TR360 detects moving ferromagnetic objects and is ideal for mobile phone detection. Mobile phones are increasingly manufactured with reduced metal content, making detection using conventional metal detectors less certain.

All mobile phones do however contain essential components that are readily detected by TR360

Easy & Cost Effective Mobile Phone Detection

Flexible & Quick to Implement

- Available as a freestanding portable unit or as a wall mounted unit.
- In less than 60 seconds the unit can be set-up and deployed immediately by one person.
- Up to 40 individuals per minute can be scanned without contact or intrusion, far quicker and easier than using a hand wand or chair type device.

Easy

- Quickly and easily deployed without warning in any area where groups can then be rapidly scanned.
- Unlike conventional metal detectors, stationary metal objects do not cause false alarms, no matter how close.
- Because it will screen through concrete, brick, wooden or plasterboard walls it is ideal for covert use.

Versatile

- Will detect a wide range of items including shanks, knives, tattoo guns, lighters and firearms
- Detects small blades (e. g. disposable razor blades) far better than most conventional metal detectors, including hand wands.

Safe & Easy to Use

- Entirely passive no health and safety concerns when scanning subjects overtly or covertly.
- No detrimental effect on electronic devices such as Cardiac Pacemakers.
- Harmless to pregnant women, removes the objection to being scanned on health grounds
