PitneyTrack® Inbound & ParcelPoint™ Smart Lockers

# Quick and convenient package delivery with PitneyTrack Inbound.

Upgrade the package loading process directly at your smart locker.

## Smart package processing right at the locker

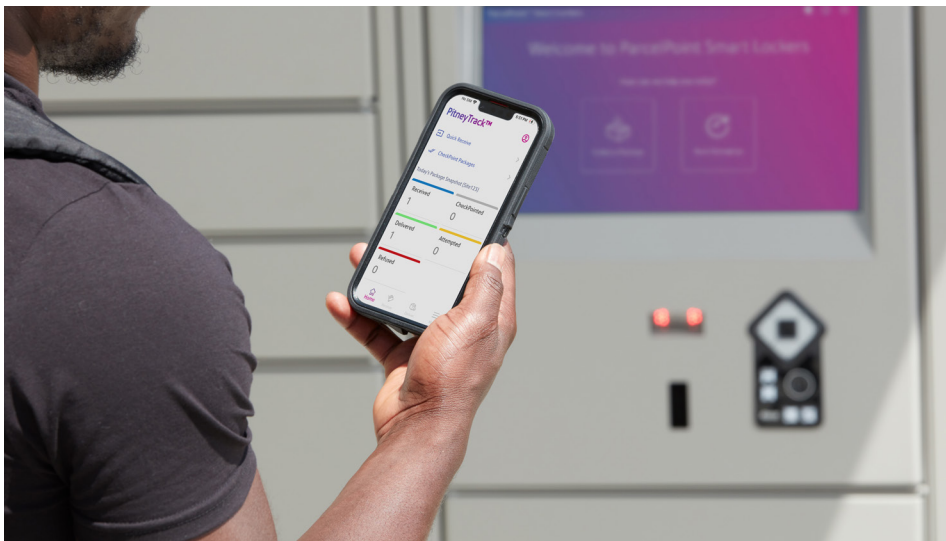

PitneyTrack Inbound seamlessly integrates with ParcelPoint Smart Lockers to provide a full chain of custody reporting and delivery.

Now, PitneyTrack Inbound makes the process of loading packages into ParcelPoint Smart Lockers quicker and more convenient than ever. Users can effortlessly use their handheld Tracking Assistant device or Mobile app to log packages, reserve a compartment and promptly load them into the lockers—right at the lockers. This innovative approach ensures more accurate scanning of package barcodes, eliminates holding large or heavy packages for scanning or using the kiosk barcode scanner.

## Key Benefits

- **Improved Efficiency:** Streamline loading packages into the locker with the handheld devices take less time than processing them at the locker kiosk.
- **Continual Package Loading:** Operators and package recipients can operate the locker simultaneously. This ensures your package loading workflow will no longer be interrupted by recipients needing to pick up their package.
- **Full Package Processing:** Now inbound packages can be fully processed directly at the locker bank—scan the package barcode, log in the receipt, reserve a locker and place in compartment—with every action recorded into PitneyTrack Inbound.
- **Processing items with no barcode:** Process mail pieces or other items without barcodes at the locker as well. Generate a tracking number and place item in locker for full chain of custody tracking.
- **Ease of Use:** Extremely user-friendly, the handheld tracking assistants or Mobile app allow for quick adoption.

## Streamline the package loading process for multiple locker banks.

While at the locker, users can scan packages into PitneyTrack® Inbound, and set the locker reservation directly with their handheld device. This workflow not only streamlines the intake process, but it also eliminates the need to pre-sort packages by locker bank location when there is more than one.
