Overview

The World Premium Plus Points of Interest – Consumer Edition (WPPPOI-CSMR) for the United States and Canada is a unique addition to the World Points of Interest data portfolio to meet the needs of consumer services in the both the countries. The WPPPOI-CSMR dataset contains a rich set of consumer focused points of interest such as leisure hotspots, geographic features, and consumer facing businesses. To provide customers with the most accurate location available for each point of interest, the position of the points of interest in the WPPPOI-CSMR dataset have been positioned using the Precisely Spectrum Enterprise Geocoding with Master Location Data (MLD) geocoded solutions.

This product guide provides information on the WPPPOI-CSMR dataset including installation and schema. The documentation provides useful information to help users benefit from the data in the product. A release notes document is provided separately with every release, listing POI counts for each country, and any known data issues.

Features

The WPPPOI-CSMR dataset provides a wide array of features designed to help users improve their consumer-oriented services. Features include:

- Focused selection of POIs that concentrate on landmarks and services relevant to consumers.
- Developed from the largest global geo-referenced POI dataset
- POI locations are geocoded using Precisely comprehensive Global Geocoding services with Master Location Data (MLD)
- POIs are classified using both Precisely miCode and the Standard Industrial Classification (SIC) codes. These classifications are cross-referenced providing POIs with a hierarchical relationships between themselves and others in their 'family'.
- A globally consistent taxonomy ensures ease of use across borders.

The WPPPOI-CSMR dataset allows users to make informed decisions around risk analysis, consider access to services, retail or recreational facilities, and is ideal for location-based marketing and “find my nearest” searches.

Premium POI Facts

Global POI data is acquired from our trusted partners and benefits from their extensive industry knowledge, reliable sources and quality processes to provide the most complete and up-to-date POI data available. Business data is collected from various government and autonomous sources such as social media, payment/trade data, government registries, company financials, yellow pages, bankruptcy filings, news & media, search engines and directories, direct investigation, and telephone company data.

The Precisely World Premium Plus POI – Consumer Edition (WPPPOI-CSMR) dataset has >10 Million business and non-business POIs in both the countries. The WPPPOI-CSMR dataset includes over 1300 unique business categories to meet a broad range of user needs.

The global business landscape is dynamic in nature. The amount of data available and the frequency of change can be overwhelming to manage. Our partners incorporate an average of 5 million global updates per day into their source data to keep pace with an ever changing business environment.

For example, every minute:

- 271 businesses will move
- 1,274 business telephone numbers will change or be disconnected
- 1,411 businesses will have a lawsuit, lien or judgment filed against them
- 673 new businesses will open their doors
- 12 businesses will file bankruptcy
- 767 CEO or owner changes will occur

Every year:

- 2% of all addresses change
- 11% of Telephone numbers will change
- 7% of CEOs will change

Master Location Data

The Master Location Data (MLD) is the only multi-sourced geocoding dataset in the market. The point-level dataset includes virtually all mailable and non-mailable US and Canada addresses. With highly precise geocoding, and a unique nine-pass process, it selects and combines multiple point-level and street-level datasets to identify the most accurate location information with the most complete coverage.

- Highest match rates in the industry

- Greater precision
- Most complete dataset of US and Canada business locations
- More accurate forward and reverse geocoding

A geocoder is assessed on the following three parameters:

1. Match Rate: The MLD has the complete coverage of addresses and points for the US.
2. Precision: The MLD X9 location determination logic ensures the highest precision coordinates.
3. Speed: The high throughput of the MLD dataset allows embedding into operational applications.

Based on the above observations, the decision to use the MLD Geocoding dataset was taken.

2 - Getting Started

Installation.....	8
Spatial Referencing System.....	8

Installation

The WPPPOI-CSMR dataset is delivered as pipe-delimited (|) text files (.TXT). To install the WPPPOI-CSMR data product:

1. Download the data to a directory on your computer.
2. Uncompress the data.
3. Once uncompressed, the data can be loaded into a database or opened directly into MapInfo® Pro.

Spatial Referencing System

The WPPPOI-CSMR product uses the spatial referencing system defined in the following table:

Projection	Coordinate System	Coordinate Units
Longitude/Latitude	Longitude/Latitude (WGS84) EPSG 4326	Decimal Degrees

GeoEnrichment Lookup Table

The GeoEnrichment Lookup table allows you to create a link between the POI dataset and any of the GeoEnrichment datasets such as Property Attributes Data, Risk, Demographics, etc. The PBKEY attribute present in this lookup table is considered to be a master key that creates the join between the different datasets.

Following is the GeoEnrichment Lookup table for reference:

Field Name	Data Type (Length)	Description
PB_ID	BIGINT	Unique identifier
FIPS	VARCHAR (2)	The two-digit FIPS state code of the state in which the address is located.
POINTCODE	VARCHAR (9)	Point ID of the matched record when matched to point-level data.
PBKEY	VARCHAR (50)	Unique ID for an addressable location
APN	VARCHAR (45)	The assessor's parcel number of the property. The assessor's parcel number is an ID number assigned to a property by the local property tax authority.

MiCode List

MiCodes are Precisely's proprietary codes that provide a unique feature classification system. Each MiCode identifies specific types of features available within a Precisely product. To facilitate the searching for, and identification of specific features within Precisely datasets, each feature follows a classification taxonomy, namely Trade Division, Group, Class, Sub Class and SIC8 Description.

The following table lists some examples of MiCodes and their corresponding class attributes:

Trade_Division	Group	Class	Sub Class	MiCode	SIC8 Description
Division G. - Retail Trade	Miscellaneous Retail	Retail Stores, Not Elsewhere Classified	Miscellaneous retail stores, nec	10808971	Ice
Division G. - Retail Trade	Miscellaneous Retail	Retail Stores, Not Elsewhere Classified	Miscellaneous retail stores, nec	10808972	Insecticide
Division G. - Retail Trade	Miscellaneous Retail	Retail Stores, Not Elsewhere Classified	Miscellaneous retail stores, nec	10808973	Maps and charts
Division G. - Retail Trade	Miscellaneous Retail	Retail Stores, Not Elsewhere Classified	Miscellaneous retail stores, nec	10808974	Plumbing and heating supplies

Best Practice to Query the Data

In order to extract the exact POIs of a particular brand, one should query the brandname column and use the following hierarchy of categories to focus down to the desired type of POI:-

- Trade_division
- Group
- Class
- Sub_class
- Micode

Due to the complexity of the dataset, it is advisable to avoid using only one category to search on. For example, if a user searches for WALMART retail, then the following SQL query needs to be executed:

(select brandname, trade_division, "Group", class, sub_class, micode from USA where brandname = 'WALMART')

Brandname	Trade_Division	Group	Class	Sub_Class	miCode	Description
WALMART	DIVISION E. - TRANSPORTATION AND PUBLIC UTILITIES	MOTOR FREIGHT TRANSPORTATION	PUBLIC WAREHOUSING AND STORAGE	GENERAL WAREHOUSING AND STORAGE/PORT/ WAREHOUSE FACILITY	10241400	GENERAL WAREHOUSING AND STORAGE
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	GROCERY STORES	GROCERY STORES/GROCCERS	10010201	SUPERMARKETS, GREATER THAN 100000 SQUARE FEET (HYPERMARKET)
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	GROCERY STORES	GROCERY STORES/GROCCERS	10010357	GROCERY STORES
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	RETAIL BAKERIES	RETAIL BAKERIES	10010352	RETAIL BAKERIES
WALMART	DIVISION G. - RETAIL TRADE	GENERAL MERCHANDISE STORES	DEPARTMENT STORES	DEPARTMENT STORES	10010101	DEPARTMENT STORES
WALMART	DIVISION G. - RETAIL TRADE	GENERAL MERCHANDISE STORES	DEPARTMENT STORES	DEPARTMENT STORES	10752901	DEPARTMENT STORES, DISCOUNT
WALMART	DIVISION G. - RETAIL TRADE	MISCELLANEOUS RETAIL	DRUG STORES AND PROPRIETARY STORES	DRUG STORES AND PROPRIETARY STORES/ PHARMACY	10230030	DRUG STORES AND PROPRIETARY STORES
WALMART	DIVISION G. - RETAIL TRADE	MISCELLANEOUS RETAIL	RETAIL STORES, NOT ELSEWHERE CLASSIFIED	MISCELLANEOUS RETAIL STORES, NEC	10808100	ALARM AND SAFETY EQUIPMENT STORES

Brandname	Trade_Division	Group	Class	Sub_Class	miCode	Description
WALMART	DIVISION G. - RETAIL TRADE	MISCELLAN EOUS RETAIL	RETAIL STORES, NOT ELSEWHERE CLASSIFIED	OPTICAL GOODS STORES/OPTICANS	10010372	OPTICAL GOODS STORES

The best practice for users looking for Walmart Retail Stores is to apply filters on brandname and category to restrict the search i.e. the following query:-

(Select brandname, trade_division, "Group", class, sub_class, micode from USA where brandname = 'WALMART' and (trade_division like '%RETAIL TRADE%'))

Brandname	Trade_Division	Group	Class	Sub_Class	miCode	Description
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	GROCERY STORES	GROCERY STORES/ GROCERS	10010201	SUPERMARKETS, GREATER THAN 100000 SQUARE FEET (HYPERMARKET)
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	GROCERY STORES	GROCERY STORES/ GROCERS	10010357	GROCERY STORES
WALMART	DIVISION G. - RETAIL TRADE	FOOD STORES	RETAIL BAKERIES	RETAIL BAKERIES	10010352	RETAIL BAKERIES
WALMART	DIVISION G. - RETAIL TRADE	GENERAL MERCHANDISE STORES	DEPARTMEN T STORES	DEPARTMENT STORES	10010101	DEPARTMENT STORES

Georesult Description

Geocode Type	Georesult	Description
Centroid	T0	Polygon centroid i.e. a park
Manually Located	T1	Manually located, connected to the street network, one or more street network entrance points
	T2	Manually located, no associated street network entrance points, i.e., Mountain Peak or Beach
	T3	Manually located, at a pre-determined point connected to a street network, i.e., a Mountain Pass or Ferry Terminal

Geocode Type	Georesult	Description
Forward Geocoded	T11	Address point location Exact House number and street name match
	T12	Address point location numeric portion of house number match and street name match. The correct side of the street is not guaranteed
	T13	Interpolated location, house number range match and street name match
	T14	Interpolated location, street name match and nearby house number
	T15	Street intersection
Reverse Geocoded	T16	Original location, address matched to the closest street with matching street name and house number range
	T17	Original Location, address matched to the closest street end point with matching street name and house number range
	T18	Original Location, address matched to the closest street with matching street name
Forward Geocoded	T19	Grouped street centroid location, street name match
Reverse Geocoded	T20	Original location address taken from nearest street segment
Forward Geocoded	T22	City centroid
	T99	No level available
