Introduction

Pitney Bowes welcomes you to StreetPro®

Welcome to the StreetPro Product Guide. This document will assist you with gaining maximum benefit from StreetPro by describing installation procedures and providing a detailed insight to the datasets and associated files that make up the product.

Feedback

Pitney Bowes Pty Ltd strives to be responsive to the evolving and growing utility of this data product within numerous and wide-ranging types of organisations. We therefore encourage any feedback and suggestions (refer to [Appendix C: Data Support and Feedback](#)) that will assist us in developing the best possible dataset for your business requirements.

In this chapter:

- ◆ [StreetPro® Layer Tables](#)6
- ◆ [StreetPro® Reference Tables](#)7
- ◆ [StreetPro® Geocoding Tables](#)8
- ◆ [Workspaces](#)8

About StreetPro®

The StreetPro suite of data products offers up-to-date premium street-level vector maps, with over 40 layers of information. They provide the real-world display and detailed quality needed to provide a flexible multi-purpose foundation for critical business use.

The StreetPro suite consists of two related products:

- **StreetPro** is the full featured version of the product suite including detailed streets information, accurate street topology for basic routing purposes, rich feature information and administrative boundaries.
- **Postcodes & Administrative Boundaries** is a reduced version of StreetPro including Postcodes, Suburbs and Administrative boundaries.

Workspaces

StreetPro makes available to all customers an international look-and-feel via its international workspace, whilst, in addition, providing an increasing number of countries with 'localised' workspaces, tailored to specific geographies.

International Workspace Example

Local Workspace Example

StreetPro[®] Installation

In this chapter:

- ◆ [Workspace File Names](#)12
- ◆ [Uninstalling StreetPro[®]](#)12

Workspace File Names

StreetPro is supplied with two different types of workspace:

Type	International Workspace File Name	Local Workspace File Name	Example Mapping Application
MWS	viet_int.mws	viet.mws	MapXtreme Workspace Manager
Mapinfo Professional Workspace	viet_int.wor	viet.wor	MapInfo Professional

Note: For more information on workspaces, refer to [Opening a Workspace](#).

Uninstalling StreetPro®

StreetPro data and workspaces for a country can be uninstalled by opening **Add or Remove Programs** from the Windows **Control Panel**, and then selecting the particular version of **StreetPro Viet Nam**, followed by **Remove**.

Confirming removal will delete all installed StreetPro files for the country from the system.

i **Warning: Any StreetPro tables or files that you have modified will not be removed during the uninstallation process.**

Data Descriptions

The reference and geocoding tables included with StreetPro are also documented here.

In This Chapter

- ◆ [Spatial Referencing](#)14
- ◆ [StreetPro Layer Tables](#).....14

Spatial Referencing

StreetPro and Postcodes & Administrative Boundaries use the spatial referencing system defined in the table below for all international workspaces.

Projection	Coordinate System	Coordinate units
Longitude/Latitude	Longitude/Latitude (WGS84)	Decimal Degrees

StreetPro Layer Tables

This section contains information about the display characteristics, micodes and the table structure of common feature layers in the international workspaces. The tables are listed in the alphabetical order of feature layer names. Within each layer, the features are listed in micode order.

Administrative Layers

Vieta0.* – Vieta3.*

The Viet Nam Administration Boundary layers include three levels of boundaries.

- Provinces (Tinh and Thanh) Boundaries: Viet Nam is divided into 58 provinces (Tinh) and 5 municipalities (Thanh) existing at the same level as provinces (Ha Noi, Hai Phong, Da Nang, Can Tho and Ho Chi Minh City).
- Districts (Huyen, Quan, Thanh and Thi Xa) Boundaries: In Viet Nam, the provinces are divided into districts (Huyen), urban districts (Quan), provincial cities (Thanh) and country-level towns (Thi Xa).
- Commune (Thi Tran, Xa and Phuong) Boundaries: In Viet Nam, the districts are further sub-divided into commune-level towns (Thi Tran), communes (Xa) and wards (Phuong).

micode	Administrative Boundary	StreetPro Nomenclature
50010101	Provinces (Tinh and Thanh)	Vieta1
50010102	Districts (Huyen, Quan, Thanh and Thi Xa)	Vieta2
50010103	Commune (Thi Tran, Xa and Phuong)	Vieta3

Administrative 0**Vieta0.*****micode and Display Characteristics**

miCode	Features	Graphic Object Details	
30040100	Sea		Brush(2,11130623,16777215) Pen(1,2,11130623)
50010100	Administrative 0 - National Boundary		Brush(2,16316906,16777215) Pen (1, 2, 16316906)

Administrative 1**Vieta1.*****micode and Display Characteristics**

miCode	Features	Graphic Object Details	
50010101	Administrative 1 - Changwat boundaries		Brush(1,0,16777215) Pen (2, 2, 10000002)

Administrative 2**Vieta2.*****micode and Display Characteristics**

miCode	Features	Graphic Object Details	
50010102	Administrative 2 - Amphoe boundaries		Brush(1,0,16777215) Pen(1,2,10000002)

Administrative 3**Vieta3.*****micode and Display Characteristics**

miCode	Features	Graphic Object Details	
50010103	Administrative 3 - Tambon/Khwaeng		Brush(1,0,16777215) Pen(1,3,10000002)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of administrative boundary	Character (100)	Yes
<i>Name_Lng</i>	Language of administrative boundary name or "UND" for undefined	Character (3)	No
<i>Off_Code</i>	Official code for administrative boundary or "UND" for undefined	Character (3) – for A0 Character (11) – for other Admin	Yes
<i>micode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Address Areas

Vietaa.*

The Address Areas table contains address features that cannot be related to the name of the street that passes by or through the area.

Not available in this region

micode and Display Characteristics

miCode	Features	Graphic Object Details	
50040200	Address Areas		Brush (2, 12632256, 16777215) Pen (1, 2, 12632256)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of address area	Character (100)	Yes
<i>Name_Lng</i>	Language of address area name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Additional Details for Point Features**Vietzp.***

The Address Details for Point Features table provides address and geocoding source information for the point features in the layers such as Business, Frontier Crossings, Public Locations, Parking, Recreation Places and Stations.

Table Structure

Field	Description	Type (width)	Indexed
<i>Table</i>	Name of the feature table that contains the feature for which the address details are provided	Character (6)	Yes
<i>Brand_Nm</i>	Brand name (available for car dealers, hotels, motels, petrol stations, car rental facilities, and restaurants only.)	Character (70)	No
<i>House_No</i>	House number	Character (10)	No
<i>Street_Nm</i>	Street Name	Character (100)	No
<i>Place_Nm</i>	Place Name	Character (100)	No
<i>Postcode</i>	Postcode	Character (10)	No
<i>Tel</i>	Telephone number	Character (25)	No
<i>Fax</i>	Fax number	Character (25)	No
<i>Email</i>	Email address	Character (70)	No
<i>Internet</i>	Internet address	Character (70)	No

Data Descriptions

Field	Description	Type (width)	Indexed
<i>PF_Loc_Src</i>	<p>Indicator value representing method and information by which the point feature was positioned:</p> <p>1 Location of point feature that has an entry point</p> <p>2 Location of point feature without entry point (closest road segment established by algorithm), e.g. mountain peak</p> <p>3 Location on a predefined place on the transportation network</p> <p>11 Exact location of the entrance of the point feature</p> <p>12 Nearest location on the transportation network with the correct address (point feature location is known)</p> <p>13 Interpolated location part way along the correct side of the road segment along which the point feature is located</p> <p>14 Location on the correct side of the correct road segment along which the point feature is located</p> <p>15 Location on the correct road segment along which the point feature is located</p> <p>16 Location on the correct road along which the point feature is located</p> <p>17 Location on the corresponding gazetteer point</p> <p>18 Location on other corresponding service</p> <p>99 No geocoding source information</p>	Character (2)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Additional Name

Vietzl.*

The Additional Names table contains alternative names and names in different languages for some features.

Table Structure

Field	Description	Type (width)	Indexed
<i>Table</i>	Name of the table that contains the feature for which the additional name is provided	Character (6)	Yes
<i>Name</i>	Name	Character (150)	No
<i>Name_Lng</i>	Language	Character (3)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Airports

Vietap.*

The Airports table contains airports.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
10310000	Airport, undefined		Symbol(87,167,16, "MapInfo Transportation",256,0)
10310010	Check-in/check-out facility at airport, undefined		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310011	Check-in facility at airport, departures		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310012	Check-out facility at airport, arrivals		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310013	Check-in/check-out facility at airport, departures and arrivals		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310100	Airport, civil		Symbol(72,13697024,12, "MapInfo Real Estate",257,0)
10310200	Airport, military		Symbol(72,5263360,12, "MapInfo Real Estate",257,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of airport	Character (100)	Yes
<i>Name_Lng</i>	Language of airport name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Business Locations

Vietb.*

The Business Locations table contains business locations, such as hotels, motels, restaurants, petrol stations, car dealers, car repair facilities, car rental offices, cash dispensers, companies, pharmacies, shops, factory outlets, wineries, and shopping centres.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
10010000	Commercial building		Symbol(57,0,12, "MapInfo Real Estate",256,0)
10010100	Shop		Symbol(57,24672,12, "MapInfo Real Estate",256,0)

10110601	Winery		Symbol(60,7340256,16, "MapInfo Real Estate",256,0)
10230030	Pharmacy		Symbol(70,40960,10, "MapInfo Cartographic",256,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of business location	Character (100)	Yes
<i>Name_Lng</i>	Language of business location name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No

Data Descriptions

Field	Description	Type (width)	Indexed
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Cross Roads

Vietcr.*

The crossroad layer contains street intersection point objects.

Table Structure

Field	Description	Type (width)	Indexed
<i>ID</i>	ID of features	Character (16)	No
<i>Street1</i>	Street name of 1st logical street that makes up intersection	Character (150)	No
<i>Street2</i>	Street name of 1st logical street that makes up intersection	Character (150)	No
<i>Street4</i>	Street name of 3rd logical street that makes up intersection	Character (150)	No
<i>Street4 (optional)</i>	Street name of 4th logical street that makes up intersection	Character (150)	No
<i>Street5 (optional)</i>	Street name of 5th logical street that makes up intersection	Character (150)	No

Ferry Routes

Vietf.*

The Ferry Routes table contains ferry connections classified by mode of operation.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
70010100	Ferry, operated by ship/hovercraft		Pen (1,9,4227327)
70020100	Ferry, operated by train		Pen (1,9,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of ferry route	Character (100)	Yes
<i>Name_Lng</i>	Language of ferry route name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Freeway Interchanges**Vietfi.***

The Freeway Interchanges table contains interchanges on all road classes.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
10340100	Motorway exit/access		Symbol(59,16750640,8)
10340200	Motorway interchange		Symbol(59,16711680,8)
10340300	Freeway interchange, other		Symbol(59,8421504,8)
10340500	Toll gate		Symbol(34,0,7, "MapInfo Symbols",256,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of freeway interchange	Character (100)	Yes
<i>Name_Lng</i>	Language of freeway interchange name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Frontier Crossings**Vietfr.***

The Frontier Crossings table contains points at which international borders may be crossed.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
10240104	Frontier crossing		Symbol(61,13697024,9,"MapInfo Transportation",256,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of Frontier crossings	Character (100)	Yes
<i>Name_Lng</i>	Language of frontier crossings name or "UND" for undefined	Character (3)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Gazetteer Layers**Vietg1.* – Vietg6.***

The gazetteer layers contain points for country capitals through to small settlements.

Gazetteer Level 1**Vietg1.*****micode and Display Characteristics**

miCode	Features	Graphic Object Details	
80010200	National capital		Symbol(61,13697024,10,"MapInfo Cartographic",256,0)

Oneways

Vietow.*

The Oneway table contains arrows indicating the direction of travel on one-way streets. The table does not contain one-way arrows for roundabouts, slip roads, motorways or dual carriageways. These road classes are assumed to be one-way by default. This table is meant for display only and therefore may not contain a point for every one-way street.

Table Structure

Field	Description	Type (width)	Indexed

Opening a Workspace

In this chapter:

- ◆ **Workspaces**48
- ◆ **Opening a StreetPro International Workspace using MapInfo Professional**48

This chapter covers workspaces and the opening of a StreetPro international workspace using MapInfo Professional.

Workspaces

A workspace is a collection of layers that can be opened together in a mapping application. It constitutes a list of all the relevant tables, windows, and settings, stored in a file with the extension **.wor**. Workspaces offer a convenient means of returning to a previously created map without having to open each table file individually.

The selected workspace keeps track of the following elements:

- Map, Browser, Graph, 3DMap, and Layout windows, including their size and position
- Query tables created from base tables using either the Select or SQL Select statements
- Graphs
- Thematic maps
- Legend windows
- Cosmetic objects
- Labels
- Styles for fonts, symbols, lines, and fill patterns used to display objects

i **Caution:** When you save a workspace, you cannot save any references to selections or queries made by the Selection tools or Query options.

Note: You can use the **Workspace Packager** tool to create a copy of your current workspace in a new folder, and copy all the data referenced by the workspace in the same folder. Using this tool, the workspace looks to these internal references to find the data and .TAB file, so you can open this workspace no matter where you have moved or copied that folder, even if you move it to a different computer. Select this tool using **Tools > Tool Manager**, and then select **Tools > Workspace Packager > Package Current Workspace**.

International Workspace

The international workspace provides a common set of display settings for all StreetPro countries.

Local Workspace

Local workspaces have been designed to display maps in a cartographic style that is more particularly related to a group of countries or an individual country.

Opening a StreetPro International Workspace using MapInfo Professional

If you have not already done so, launch MapInfo Professional from the Windows Start menu. If the program was already running, select **File > Close All** to shut everything down and so avoid cluttering up your screen with unnecessary windows.

If the program was not already running, the **Quick Start** dialog box is displayed as soon as you start the program. This gives you the option of restoring the previous session or workspace, or opening a new workspace or table.

To open a workspace:

1. Either:
 - a. In the **Quick Start** dialog box, click **Open a Workspace** and then **Open**.
Or
 - b. From the MapInfo Professional **main menu**, select **File > Open** and then choose **Workspace (*.wor)** from the **Files of type** drop-down list.
2. Browse to the workspace you wish to open, and then click **Open**.
Note: Open the *_int_mipro125.wor file for the required country if you are using MapInfo Professional 12.5, or the *_int.wor file if you are using an earlier version of MapInfo Professional.
3. Once the workspace is displayed, as per the [International Workspace Example](#), then you can proceed as required.

When you exit MapInfo Professional, the last session is stored (unless you have set your preferences so that it will not be, using **Options > Preferences > Startup**). If there are files that you do not wish to be added to your workspace, close them before exiting.

Language Settings and Special Characters

This chapter covers information about language setting and displaying special characters in StreetPro using MapInfo Professional:

In this chapter:

- ♦ [Displaying Special Characters in MapInfo Professional52](#)

Displaying Special Characters in MapInfo Professional

If you are using an edition of StreetPro for which the country character set is not Latin-1, you must change a number of system settings before special characters can be displayed correctly.

Language settings

In the Windows **Start** menu, open the **Control Panel** and then the **Regional and Language Options** dialog. Click the **Advanced** tab and change the language in the drop-down menu to that of the language for which you wish to view special characters (e.g. Russian for Cyrillic characters).

Note: The computer will need to be restarted before changes become visible. The settings must be set back to English once you are finished using the StreetPro tables, as other applications may be affected.

Font selection

The second change that may have to be made in order for the characters to be displayed correctly is to change the font within MapInfo Professional. As each browser is opened, change the font of the browser using either the **Text Style** button on the **Drawing** toolbar, or by clicking **Options > Text style...** to open the font change dialog. You can also use the shortcut key [F8] to open this dialog.

Country	Windows Char Set	Display Font
Hong Kong	WindowsTradChinese	Tahoma
Macau	WindowsTradChinese	Tahoma
Philippines	WindowsLatin1	Tahoma
Taiwan	WindowsTradChinese	Tahoma
Thailand	WindowsThai	Tahoma
Viet Nam	WindowsLatin1	Tahoma
Singapore	WindowsLatin1	Tahoma

Tahoma is the recommended style, as it supports many special characters and associated diacritics.

The default label style can be changed by clicking **Options > Preferences...** then the **Styles...** button. The **Text** style can then be set to the appropriate font.

A

Appendix A: Understanding Metadata

What Is Metadata?

Metadata, in its simplest definition, is data about data. Metadata describes the content, source, history, structure and support that may exist for a data product or entity. Pitney Bowes metadata exists in two forms:

- Metadata for the complete product is included in the StreetPro_Viet Nam_2015_03.xml' file in the Data\Metadata folder on the installation disk.
- Metadata as keyword and value pairs can be found within each MapInfo format table (.TAB file).

Our metadata is designed to be compliant with the 2003 ISO Geospatial metadata standard. As such, this enables the data products from Pitney Bowes to be available for data cataloguing within any system that uses ISO metadata standards.

Purpose of Metadata

The main purposes of metadata is to provide a mechanism for you to identify the data product unambiguously, list all legal restrictions, and provide copyright information and contact information. This is important information for knowing the currency of the data, and to ensure that the correct and/or most recent version is being used. It is also the information required for identifying the correct data product when contacting Technical Support.

Metadata Sections

The following metadata sections are included at both product and table level:

- **Metadata overview:** Including language, character set and metadata standards.
- Contact and distribution information.

Understanding Metadata

- **Data Description:** product name and version.
- **Extent:** north and south bounding latitudes, east and west bounding longitudes.
- **Resource Constraints:** The Pitney Bowes mapping software solutions that can be used with this product.
- **Abstract:** brief description of the product/table.
- **Data Lineage:** data source, provider and vintage.
- **Spatial Reference System:** projection, ellipsoid and datum.

Additional sections at product level:

- **Keywords:** layers in the product, plus country and national capital.
- Further Information.

Additional section at table level:

- **Object information:** number of points or regions.

Viewing Metadata

Product Level

An xslt stylesheet is provided to facilitate reading product level metadata.

Table Level

Open the .TAB file in Notepad:

```
gbripu.tab - Notepad
File Edit Format View Help
!table
!version 300
!charset windowsLatin1

Definition Table
Type NATIVE Charset "windowsLatin1"
Fields 5
  Name Char (100) Index 1 ;
  Name_Lng Char (3) ;
  miCode Integer ;
  SmartLabel Char (100) ;
  FeatureID Char (16) Index 2 ;

ReadOnly
begin_metadata
"\isReadOnly" = "FALSE"
"\mdLang" = "English"
"\mdChar" = "utf8"
"\mdHrLv" = "dataset"
"\mdStanName" = "ISO 19115 and 19139"
"\mdStanVer" = "2003E"
```

Alternatively, if you have MapInfo Professional installed, you can use the Table Manager tool to view and edit your metadata.

B

Appendix B: Extras Folder

This section contains information about the additional tables included in the StreetPro product. The additional tables included are -

- Language Table (LNG.*)
- micodemaster Table (micodemaster.*)
- Viet Nam Gazetteer Full Table (vietGF.*)
- Viet Nam Postcodes Boundary Table (vietPC.*)
- Viet Nam Postcodes Points Table (vietPCP.*)
- Viet Nam Postcodes Boundaries and Commune Index Table (VietPC_COMMUNE_INDEX.*)

Language Table

(LNG.*)

The languages that are used in StreetPro with their abbreviations are included in the file LNG*.

Table Structure

Field	Description	Type (width)	Indexed
<i>Language</i>	Languages used in StreetPro	Character (25)	No
<i>Abbrev</i>	Language Abbreviation	Character (3)	No

micodemaster Table

(micodemaster.*)

StreetPro releases to date have incorporated feature type coding that is consistent but not necessarily related to a recognised standard. Pitney Bowes Pty Ltd, with an objective to align to recognised standards and add more 'depth' and 'intelligence' to its coding has developed a coding system that is progressively being applied to its range of data products globally - the micode schema.

This schema is a variation of the feature-coding schema in "Defence Mapping Agency (now NIMA) standard, Mapping, Charting & Geodesy Glossary of Feature and Attribute Definitions, MIL-STD-2408, April 1995". The schema has been modified to be an eight-digit/three-part schema with its own definitions for the use of values within each part. The eight-digit code is made up of a two-digit Category code, followed by a two-digit Sub-category code, and then a four-digit Sub-feature code.

For example: Category + Subcategory + Sub-feature

10+07+0200 (This micode refers to POIs category with sub category of Business Locations and sub-features as Hotel/Motel)

A MapInfo format micode lookup table is supplied with StreetPro.

The screenshot shows a window titled "miCode_th Browser" containing a table with the following data:

Table_ID	Table	Description	miCode	Fcode	Style
AA	Address Areas	Address area	50,030,200	14160	Brush (2, 12632256, 16777215)!Pen (1, 2, 12632256)
X	Address Ranges	Address area	20,090,400	54165	Pen (1, 2, 16752800)
A0	Administrative 0	Sea	30,040,100	14310	Brush (2, 11130623, 16777215)!Pen (1, 2, 11130623)
A0	Administrative 0	Administration 0	50,010,100	11111	Brush (2, 16316906, 16777215)!Pen (1, 2, 16316906)
A1	Administrative 1	Administration 1	50,010,101	11112	Brush (1, 0, 16777215)!Pen (2, 2, 10000002)
A2	Administrative 2	Administration 2	50,010,102	11118	Brush (1, 0, 16777215)!Pen (1, 2, 10000002)

Table Structure

Field	Description	Type (width)	Indexed
<i>Table_ID</i>	Letter code assigned to layer	Character (6)	No
<i>Table</i>	Layer category names	Character (25)	No
<i>Description</i>	Details of sub-features falling under category	Character (100)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>FCode</i>	Feature Code provided by data provider	Character (8)	No
<i>Style</i>	Display characteristics details	Character (60)	No

Gazetteer Full

Vietgf.*

For analysis purposes, the full gazetteer table (vietgf.*), consolidating all the gazetteer layers, is included in the Extra folder.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
80010200	National capital		Symbol(61,13697024,10, "MapInfo Cartographic",256,0)
80010101	Major City		Symbol (47,0,10, "MapInfo Cartographic",256,0)

80010103	Town		Symbol (34,16777215,8)
80010104	Small Town		Symbol (34,16777215,6)
80010105	Other Settlement		Symbol (41,8421504,5, "MapInfo Cartographic",256,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of settlement	Character (100)	No
<i>Name_Lng</i>	Language of settlement name or "UND" for undefined	Character (3)	No
<i>IndexName</i>	Name of settlement tagged with admin boundary	Character (150)	Yes
<i>Alt_Name</i>	Alternative name of settlement	Character (100)	No
<i>Alt_Nm_Lng</i>	Language of alternative name of settlement or "UND" for undefined	Character (3)	No
<i>Category</i>	Population category code	Character (3)	Yes
<i>micode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Postcode Boundary**Vietpc.***

The Postcodes boundary layer comprises polygons representing the boundaries of unique postcode values in Viet Nam. This layer is suitable for refining address searching and geocoding processes when used in conjunction with the Viet Nam Street centreline data.

Not available in this region

micode and Display Characteristics

miCode	Features	Graphic Object Details	
-	Postcode		Brush (1, 0, 16777215) Pen (1, 2, 65535)

Table Structure

Field	Description	Type (width)	Indexed
<i>Postcode</i>	Postcode values	Character (5)	Yes
<i>Province</i>	Admin level 1	Character (40)	No

Field	Description	Type (width)	Indexed
<i>Commune</i>	Admin level 3	Character (40)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	No

Postcode Points

Vietpcp.*

The Postcodes Point layer contains the locations of local post offices in Viet Nam. There are occurrences of multiple post offices being assigned the same postcode values.

micode and Display Characteristics

miCode	Features	Graphic Object Details	
10240500	Post office		Symbol (34,128,10, "MapInfo 3.0 Compatible",0,0)

Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of post office	Character (200)	Yes
<i>Name_Lng</i>	Language of post office name or "UND" for undefined	Character (3)	No
<i>Postcode</i>	Postcode value	Character (5)	No
<i>micode</i>	MapInfo global feature code	Integer	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

Postcode and Commune Index TableVietPC_COMMUNE_INDEX.*

The multiple Postcodes Point s are being assigned the same postcode values. Postcode points have been tagged with lower admin boundary (Commune) to segregate multiple post offices with same postcode value to create VietPC_COMMUNE_INDEX.* table.

Not available in this region

Table Structure

Field	Description	Type (width)	Indexed
<i>POSTCODE</i>	Postcode value	Character (30)	Yes
<i>COMMUNE_INDEX</i>	Commune in which the post office lies	Character (100)	Yes

C

Appendix C: Data Support and Feedback

Pitney Bowes Pty Ltd continues to enhance the data support and feedback facilities available to our clients. An infrastructure has been developed to streamline the handling of customer feedback regarding data products and to ensure that appropriate responses are provided, with corrective action being taken where appropriate. For the various types of possible feedback, and their submission, refer to the form on the next page.

Feedback Process

The process is as follows:

1. Completion of Feedback Form by Client: The electronic form on the following page has a Send button that you can use to send the AsiaPac Data Production Team general comments concerning any of our data products.
You can also email comments (and associated screenshots) directly to the following email address: ozdata@mapinfo.com
2. Handling: All customers are sent confirmation of receipt of email feedback, and then subsequently notified of the type and timetable of the corrective action (where appropriate). Dependent on the type of feedback, the report may be actioned immediately or scheduled for routine maintenance action as part of the next scheduled release. The Feedback Database keeps track of progress on each item. Follow-up action and advice are provided wherever necessary.

Electronic Feedback Form

You can send us feedback on any of the data products supplied by Pitney Bowes Business Insight, by completing the information below and clicking **Send** in the lower-right corner of the page. This generates an e-mail to which you can attach any screenshots that you feel would help illustrate your feedback.

Feedback can be in the form of correction advice, notification of changes, requests for enhancements/features, or requests for information. All feedback is valued by the Data Production Team and contributes to product improvements and enhanced value to users.

Your feedback will be emailed directly to the AsiaPac Data Production Team at ozdata@mapinfo.com, who will review and action it as soon as is practicable.

Contact Preferences
