# Chapter 1: Introduction

## Pitney Bowes Software welcomes you to StreetPro®

Welcome to the StreetPro Product Guide. This document will assist you with gaining maximum benefit from StreetPro by describing installation procedures and providing a detailed insight to the datasets and associated files that make up the product.

### Feedback

Pitney Bowes Software strives to be responsive to the evolving and growing utility of this data product within numerous and wide-ranging types of organisations. We therefore encourage any feedback and suggestions (refer to [Appendix C: Data Support and Feedback](#)) that will assist us in developing the best possible dataset for your business requirements.

### In this chapter:

◆ <a href="#">About StreetPro®</a> .....	6
◆ <a href="#">StreetPro® Layer Tables</a> .....	6
◆ <a href="#">StreetPro® Reference Tables</a> .....	7
◆ <a href="#">StreetPro® Geocoding Tables</a> .....	8
◆ <a href="#">Workspaces</a> .....	8

## About StreetPro®

The StreetPro suite of data products offers up-to-date premium street-level vector maps, with over 40 layers of information. They provide the real-world display and detailed quality needed to provide a flexible multi-purpose foundation for critical business use.

**StreetPro** is the full featured version of the product suite including detailed streets information, accurate street topology for basic routing purposes, rich feature information and administrative boundaries.

## StreetPro® Layer Tables

Address details for point features	x
Postcode Locality Index	x

## StreetPro<sup>®</sup> Geocoding Tables

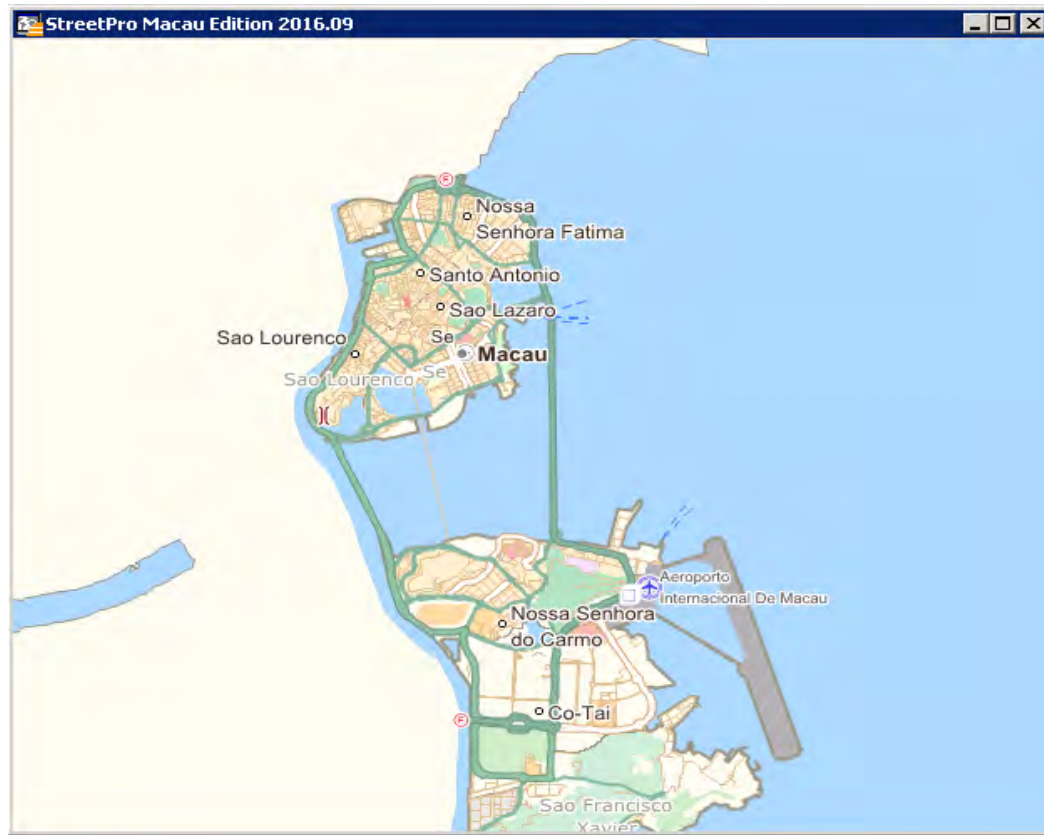

Table	StreetPro <sup>®</sup>
Address Ranges	x
Street Names	x
Street Intersections	x

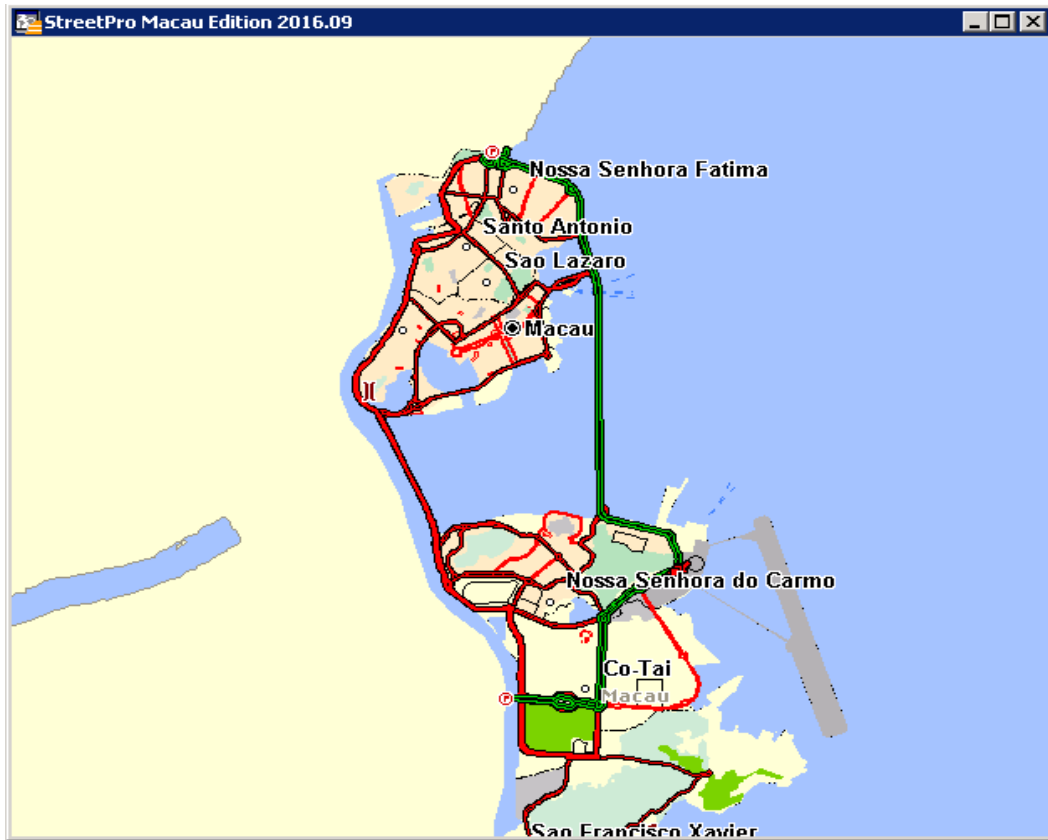

## Workspaces

StreetPro makes available to all customers an international look-and-feel via its international workspace, whilst, in addition, providing an increasing number of countries with 'localised' workspaces, tailored to specific geographies.

### International Workspace Example

## Local Workspace Example

## Spectrum Spatial (MapXtreme) Workspace

We have implemented a new (MapXtreme) Workspace (MWS), \*.mws workspace file designed as xxx\_streetpro.mws where xxx represents three (3) letter country code.

The Workspace has been optimized to enable raster tile generation within Spectrum Spatial; focusing on both tile rendering, speed and representation of key geographical features at appropriate scale within the map view. This allow users to overlay their data providing geographical context and insight into what's important to them.

## Chapter 2: StreetPro® Installation

### In this chapter:

- ◆ [Workspace File Names](#) .....13
- ◆ [Uninstalling StreetPro®](#) .....13

## Workspace File Names

StreetPro is supplied with two different types of workspace:

Type	International Workspace File Name	Local Workspace File Name	Example Mapping Application
MWS	maca_int.mws mac_streetpro.mws	maca.mws	MapXtreme Workspace Manager Spectrum Spatial
WOR	maca_int.wor	maca.wor	MapInfo Professional

**Note:** For more information on workspaces, refer to [Chapter 4: Opening a Workspace](#).

## Uninstalling StreetPro®

StreetPro data and workspaces for a country can be uninstalled by opening **Add or Remove Programs** from the Windows **Control Panel**, and then selecting the particular version of **StreetPro Macau**, followed by **Remove**.

Confirming removal will delete all installed StreetPro files for the country from the system.

---

 **Warning: Any StreetPro tables or files that you have modified will not be removed during the uninstallation process.**

---

## Chapter 3: Data Descriptions

The reference and geocoding tables included with StreetPro are also documented here.

### In This Chapter

- ◆ [Spatial Referencing](#) .....15
- ◆ [StreetPro Layer Tables](#).....15

## Spatial Referencing

StreetPro and Postcodes & Administrative Boundaries use the spatial referencing system defined in the table below for all international workspaces.

Projection	Coordinate System	Coordinate units
Longitude/Latitude	Longitude/Latitude (WGS84)	Decimal Degrees

## StreetPro Layer Tables

This section contains information about the display characteristics, miCodes and the table structure of common feature layers in the international workspaces. The tables are listed in the alphabetical order of feature layer names. Within each layer, the features are listed in miCode order.

### Administrative Layers

**macaa0.\*- macaa2.\***

The Macau Administration Boundary layers include two levels of boundary type. These are (in ascending order of size):

- Parish Boundary
- Special Administrative Region Boundary

miCode	Administrative Boundary	StreetPro Nomenclature
50010100	Macau	macaa0
50010101	Special Administrative Region Boundary	macaa1
50010102	Parish Boundary	macaa2

**Administrative 0****macaa0.\*****miCode and Display Characteristics**

miCode	Features	Graphic Object Details	
30040100	Sea		Brush(2,11130623,16777215) Pen(1,2,11130623)
50010100	Administrative 0 - National Boundary		Brush(2,16316906,16777215) Pen (1, 2, 16316906)

**Administrative 1****macaa1.\*****miCode and Display Characteristics**

miCode	Features	Graphic Object Details	
50010101	Administrative 1 - Rehiyon boundaries		Brush(1,0,16777215) Pen (2, 2, 10000002)

**Administrative 2****macaa2.\*****miCode and Display Characteristics**

miCode	Features	Graphic Object Details	
50010102	Administrative 2 - Lalawigan boundaries		Brush(1,0,16777215) Pen(1,2,10000002)

**Table Structure**

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of administrative boundary	Character (100)	Yes
<i>Name_Lng</i>	Language of administrative boundary name or "UND" for undefined	Character (3)	No
<i>Off_Code</i>	Official code for administrative boundary or "UND" for undefined	Character (3) – for A0 Character (11) – for other Admin	Yes

## Data Descriptions

---

Field	Description	Type (width)	Indexed
<i>miCode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

## Address Areas

macaaa.\*

The Address Areas table contains address features that cannot be related to the name of the street that passes by or through the area.

*Not available in this region*

### miCode and Display Characteristics

miCode	Features	Graphic Object Details	
50040200	Address Areas		Brush (2, 12632256, 16777215) Pen (1, 2, 12632256)

## Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of address area	Character (100)	Yes
<i>Name_Lng</i>	Language of address area name or "UND" for undefined	Character (3)	No
<i>miCode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

## Additional Details for Point Features

macazp.\*

The Address Details for Point Features table provides address and geocoding source information for the point features in the layers such as Business, Frontier Crossings, Public Locations, Parking, Recreation Places and Stations.

## Table Structure

<b>Field</b>	<b>Description</b>	<b>Type (width)</b>	<b>Indexed</b>
<i>Table</i>	Name of the feature table that contains the feature for which the address details are provided	Character (6)	Yes
<i>Brand_Nm</i>	Brand name (available for car dealers, hotels, motels, petrol stations, car rental facilities, and restaurants only.)	Character (70)	No
<i>House_No</i>	House number	Character (10)	No
<i>Street_Nm</i>	Street Name	Character (100)	No
<i>Place_Nm</i>	Place Name	Character (100)	No
<i>Postcode</i>	Postcode	Character (10)	No
<i>Tel</i>	Telephone number	Character (25)	No
<i>Fax</i>	Fax number	Character (25)	No
<i>Email</i>	Email address	Character (70)	No
<i>Internet</i>	Internet address	Character (70)	No

## Data Descriptions

Field	Description	Type (width)	Indexed
<i>PF_Loc_Src</i>	<p>Indicator value representing method and information by which the point feature was positioned:</p> <p><b>1</b> Location of point feature that has an entry point</p> <p><b>2</b> Location of point feature without entry point (closest road segment established by algorithm), e.g. mountain peak</p> <p><b>3</b> Location on a predefined place on the transportation network</p> <p><b>11</b> Exact location of the entrance of the point feature</p> <p><b>12</b> Nearest location on the transportation network with the correct address (point feature location is known)</p> <p><b>13</b> Interpolated location part way along the correct side of the road segment along which the point feature is located</p> <p><b>14</b> Location on the correct side of the correct road segment along which the point feature is located</p> <p><b>15</b> Location on the correct road segment along which the point feature is located</p> <p><b>16</b> Location on the correct road along which the point feature is located</p> <p><b>17</b> Location on the corresponding gazetteer point</p> <p><b>18</b> Location on other corresponding service</p> <p><b>99</b> No geocoding source information</p>	Character (2)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

### Additional Name

**macazl.\***

The Additional Names table contains alternative names and names in different languages for some features.

### Table Structure

Field	Description	Type (width)	Indexed
<i>Table</i>	Name of the table that contains the feature for which the additional name is provided	Character (6)	Yes
<i>Name</i>	Name	Character (150)	No
<i>Name_Lng</i>	Language	Character (3)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

### Address Files

**macax1.\*, macax2.\*macax.\***

### Address Ranges

**macax1.\***

The Address Ranges are line features containing graphic and tabular information for street segments, address ranges, and reference numbers. These segments are additionally tagged with administrative information, so that the user can perform geocoding operations from within the MapInfo Professional.

In style guide depicted below, **dotted** style represent the segment without address ranges and **solid line** style represent segments with house number despite being same miCode present in both these type of segments.

### miCode and Display Characteristics

miCode	Features	Graphic Object Details	
20050200	Address Ranges	---	Pen (2, 5, 8421504)
20080200	Address Ranges	---	Pen (2, 5, 8421504)

<i>MI_Refnum</i>	Primary Key index linking street names with street segment	Integer	Yes

### Street Name

macax2.\*

The Street Name table is a dataset containing indexed street names. This table can only be displayed in a browser window because it does not have any graphic information.

**Table Structure**

Field	Description	Type (width)	Indexed
<i>St_Nm</i>	Street Name	Char (70)	Yes
<i>MI_Refnum</i>	Primary Key index linking street names with street segment	Integer	Yes

**Linked Address****macax.\***

The Linked Address file is a view and has no structure, it opens Address Ranges and Street Name tables and joins them on MI\_Refnum to create a view.

**Airports****macaap.\***

The Airports table contains airports.

**miCode and Display Characteristics**

miCode	Features	Graphic Object Details	
10310000	Airport, undefined		Symbol(87,167,16, "MapInfo Transportation",256,0)
10310010	Check-in/check-out facility at airport, undefined		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310011	Check-in facility at airport, departures		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310012	Check-out facility at airport, arrivals		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310013	Check-in/check-out facility at airport, departures and arrivals		Symbol(34,167,7, "MapInfo Cartographic",256,0)
10310100	Airport, civil		Symbol(72,13697024,12, "MapInfo Real Estate",257,0)
10310200	Airport, military		Symbol(72,5263360,12, "MapInfo Real Estate",257,0)

## Data Descriptions

miCode	Features	Graphic Object Details	
10310101	Airport, Public		Symbol (72,4474083,14, "MapInfo Real Estate",257,0)
10310102	Airport, Private authority		Symbol (72,0,14, "MapInfo Real Estate",257,0)

## Table Structure

Field	Description	Type (width)	Indexed
<i>Name</i>	Name of airport	Character (100)	Yes
<i>Name_Lng</i>	Language of airport name or "UND" for undefined	Character (3)	No
<i>miCode</i>	MapInfo global feature code	Integer	No
<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

## Business Locations

macab.\*

The Business Locations table contains business locations, such as hotels, motels, restaurants, petrol stations, car dealers, car repair facilities, car rental offices, cash dispensers, companies, pharmacies, shops, factory outlets, wineries, and shopping centres.

### miCode and Display Characteristics

<i>SmartLabel</i>	Same as Name with added carriage returns	Character (100)	No
<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

**Oneways**

macaow.\*

The Oneway table contains arrows indicating the direction of travel on one-way streets. The table does not contain one-way arrows for roundabouts, slip roads, motorways or dual carriageways. These road classes are assumed to be one-way by default. This table is meant for display only and therefore may not contain a point for every one-way street.

**miCode and Display Characteristics**

miCode	Features	Graphic Object Details

<i>FeatureID</i>	Unique feature identifier within this country	Character (16)	Yes

# Chapter 4: Opening a Workspace

## In this chapter:

- ◆ Workspaces .....61
- ◆ Opening a StreetPro International Workspace using MapInfo Professional61

This chapter covers workspaces and the opening of a StreetPro international workspace using MapInfo Professional.

# Workspaces

A workspace is a collection of layers that can be opened together in a mapping application. It constitutes a list of all the relevant tables, windows, and settings, stored in a file with the extension **.wor**. Workspaces offer a convenient means of returning to a previously created map without having to open each table file individually.

The selected workspace keeps track of the following elements:

- Map, Browser, Graph, 3DMap, and Layout windows, including their size and position
- Query tables created from base tables using either the Select or SQL Select statements
- Graphs
- Thematic maps
- Legend windows
- Cosmetic objects
- Labels
- Styles for fonts, symbols, lines, and fill patterns used to display objects

---

**i** **Caution:** When you save a workspace, you cannot save any references to selections or queries made by the Selection tools or Query options.

---

**Note:** You can use the **Workspace Packager** tool to create a copy of your current workspace in a new folder, and copy all the data referenced by the workspace in the same folder. Using this tool, the workspace looks to these internal references to find the data and .TAB file, so you can open this workspace no matter where you have moved or copied that folder, even if you move it to a different computer. Select this tool using **Tools > Tool Manager**, and then select **Tools > Workspace Packager > Package Current Workspace**.

## International Workspace

The international workspace provides a common set of display settings for all StreetPro countries.

## Local Workspace

Local workspaces have been designed to display maps in a cartographic style that is more particularly related to a group of countries or an individual country.

## Opening a StreetPro International Workspace using MapInfo Professional

If you have not already done so, launch MapInfo Professional from the Windows Start menu. If the program was already running, select **File > Close All** to shut everything down and so avoid cluttering up your screen with unnecessary windows.

If the program was not already running, the **Quick Start** dialog box is displayed as soon as you start the program. This gives you the option of restoring the previous session or workspace, or opening a new workspace or table.

To open a workspace:

1. Either:
  - a. In the **Quick Start** dialog box, click **Open a Workspace** and then **Open**.  
Or
  - b. From the MapInfo Professional **main menu**, select **File > Open** and then choose **Workspace (\*.wor)** from the **Files of type** drop-down list.
2. Browse to the workspace you wish to open, and then click **Open**.  
**Note:** Open the \*\_int\_mipro125.wor file for the required country if you are using MapInfo Professional 12.5, or the \*\_int.wor file if you are using an earlier version of MapInfo Professional.
3. Once the workspace is displayed, as per the [International Workspace Example](#), then you can proceed as required.

When you exit MapInfo Professional, the last session is stored (unless you have set your preferences so that it will not be, using **Options > Preferences > Startup**). If there are files that you do not wish to be added to your workspace, close them before exiting.

# Chapter 5: Language Settings and Special Characters

This chapter covers information about language setting and displaying special characters in StreetPro using MapInfo Professional.

## In this chapter:

- ♦ [Displaying Special Characters in MapInfo Professional . . . . .64](#)

## Displaying Special Characters in MapInfo Professional

If you are using an edition of StreetPro for which the country character set is not Latin-1, you must change a number of system settings before special characters can be displayed correctly.

### Language settings

In the Windows **Start** menu, open the **Control Panel** and then the **Regional and Language Options** dialog. Click the **Advanced** tab and change the language in the drop-down menu to that of the language for which you wish to view special characters (e.g. Russian for Cyrillic characters).

**Note:** The computer will need to be restarted before changes become visible. The settings must be set back to English once you are finished using the StreetPro tables, as other applications may be affected.

### Font selection

The second change that may have to be made in order for the characters to be displayed correctly is to change the font within MapInfo Professional. As each browser is opened, change the font of the browser using either the **Text Style** button on the **Drawing** toolbar, or by clicking **Options > Text style...** to open the font change dialog. You can also use the shortcut key [F8] to open this dialog.

Country	Windows Char Set	Display Font
Hong Kong	WindowsTradChinese	Tahoma
Macau	WindowsTradChinese	Tahoma
Malaysia	WindowsLatin1	Tahoma
Philippines	WindowsLatin1	Tahoma
Taiwan	WindowsTradChinese	Tahoma
Thailand	WindowsThai	Tahoma
Viet Nam	WindowsLatin1	Tahoma
Singapore	WindowsLatin1	Tahoma

Tahoma is the recommended style, as it supports many special characters and associated diacritics.

The default label style can be changed by clicking **Options > Preferences...** then the **Styles...** button. The **Text** style can then be set to the appropriate font.

# A

## Appendix A: Understanding Metadata

### What Is Metadata?

Metadata, in its simplest definition, is data about data. Metadata describes the content, source, history, structure and support that may exist for a data product or entity. Pitney Bowes Software metadata exists in two forms:

- Metadata for the complete product is included in the 'StreetPro\_Macau\_2016\_09.xml' file in the Data\Metadata folder on the installation disk.
- Metadata as keyword and value pairs can be found within each MapInfo format table (.TAB file).

Our metadata is designed to be compliant with the 2003 ISO Geospatial metadata standard. As such, this enables the data products from Pitney Bowes Software to be available for data cataloguing within any system that uses ISO metadata standards.

### Purpose of Metadata

The main purposes of metadata is to provide a mechanism for you to identify the data product unambiguously, list all legal restrictions, and provide copyright information and contact information. This is important information for knowing the currency of the data, and to ensure that the correct and/or most recent version is being used. It is also the information required for identifying the correct data product when contacting Technical Support.

### Metadata Sections

The following metadata sections are included at both product and table level:

- **Metadata overview:** Including language, character set and metadata standards.
- Contact and distribution information.

## Understanding Metadata

- **Data Description:** product name and version.
- **Extent:** north and south bounding latitudes, east and west bounding longitudes.
- **Resource Constraints:** The Pitney Bowes Software (PBS) mapping solutions that can be used with this product.
- **Abstract:** brief description of the product/table.
- **Data Lineage:** data source, provider and vintage.
- **Spatial Reference System:** projection, ellipsoid and datum.

Additional sections at product level:

- **Keywords:** layers in the product, plus country and national capital.
- Further Information.

Additional section at table level:

- **Object information:** number of points or regions.

## Viewing Metadata

### Product Level

An xslt stylesheet is provided to facilitate reading product level metadata.

### Table Level

Open the .TAB file in Notepad:

```
!table
!version 300
!charset windowsTradChinese
!edit_version 650

Definition Table
Type NATIVE Charset "windowsTradChinese"
Fields 6
  Name Char (100) Index 1 ;
  Name_Lng Char (3) ;
  Off_Code Char (3) Index 2 ;
  miCode Integer ;
  SmartLabel Char (100) ;
  FeatureID Char (16) Index 3 ;

begin_metadata
  "\IsReadOnly" = "FALSE"
  "\MapInfo" = ""
  "\MapInfo\TableID" = "56a7ea68-4034-426e-bdd6-bad4383c7657"
  "\MapInfo\ParentTableID" = "fcded893-1b9d-4470-8b10-0c01f17d814d"
  "\mdFileID" = "SPro_Metadata_2016_09.xml"
  "\mdLang" = "English"
  "\mdChar" = "utf8"
  "\mdHrLv" = "dataset"
  "\mdStanName" = "ISO 19115 and 19139"
  "\mdStanVer" = "2003E"
  "\mdContact" = ""
  "\mdContact\RespParty" = ""
  "\mdContact\RespParty\role" = "owner"
  "\mdContact\RespParty\rporgName" = "Pitney Bowes Software"
```

Alternatively, if you have MapInfo Professional installed, you can use the Table Manager tool to view and edit your metadata.

# B

## Appendix B: Extras Folder

This section contains information about the additional tables included in the StreetPro product. The additional tables included are:

- Language Table (LNG.\*)
- miCodemaster Table (miCodemaster.\*)
- Macau Gazetteer Full Table (macaGF.\*)
- Macau Postcodes Points Table (macaPCP.\*)

## Language Table

(LNG.\*)

The languages that are used in StreetPro with their abbreviations are included in the file LNG\*.

### Table Structure

Field	Description	Type (width)	Indexed
Language	Languages used in StreetPro	Character (25)	No
Abbrev	Language Abbreviation	Character (3)	No

## miCodemaster Table

(miCodemaster.\*)

StreetPro releases to date have incorporated feature type coding that is consistent but not necessarily related to a recognised standard. Pitney Bowes Software, with an objective to align to recognised standards and add more 'depth' and 'intelligence' to its coding has developed a coding system that is progressively being applied to its range of data products globally - the miCode schema.

This schema is a variation of the feature-coding schema in "Defence Mapping Agency (now NIMA) standard, Mapping, Charting & Geodesy Glossary of Feature and Attribute Definitions, MIL-STD-2408, April 1995". The schema has been modified to be an eight-digit/three-part schema with its own definitions for the use of values within each part. The eight-digit code is made up of a two-digit Category code, followed by a two-digit Sub-category code, and then a four-digit Sub-feature code.

**For example:** Category + Subcategory + Sub-feature

10+07+0200 (This miCode refers to POIs category with sub category of Business Locations and sub-features as Hotel/Motel)

A MapInfo format miCode lookup table is supplied with StreetPro.

Table_ID	Table_name	Description	miCode	Style
A0	Administrative 0	Administration Level 0 - Country Boundary	50,010,100	Brush (2, 16316906, 16777215) Pen (1, 2, 16316906)
A0	Administrative 0	Sea	30,040,100	Brush (2, 11130623, 16777215) Pen (1, 2, 11130623)

## Appendix C: Data Support and Feedback

Pitney Bowes Software continues to enhance the data support and feedback facilities available to our clients. An infrastructure has been developed to streamline the handling of customer feedback regarding data products and to ensure that appropriate responses are provided, with corrective action being taken where appropriate. For the various types of possible feedback, and their submission, refer to the form on the next page.

### Feedback Process

The process is as follows:

1. Completion of Feedback Form by Client: The electronic form on the following page has a Send button that you can use to send the AsiaPac Data Production Team general comments concerning any of our data products.  
You can also email comments (and associated screenshots) directly to the following email address: [ozdata@mapinfo.com](mailto:ozdata@mapinfo.com)
2. Handling: All customers are sent confirmation of receipt of email feedback, and then subsequently notified of the type and timetable of the corrective action (where appropriate). Dependent on the type of feedback, the report may be actioned immediately or scheduled for routine maintenance action as part of the next scheduled release. The Feedback Database keeps track of progress on each item. Follow-up action and advice are provided wherever necessary.

## Electronic Feedback Form

You can send us feedback on any of the data products supplied by Pitney Bowes Software, by completing the information below and clicking **Send** in the lower-right corner of the page. This generates an e-mail to which you can attach any screenshots that you feel would help illustrate your feedback.

Feedback can be in the form of correction advice, notification of changes, requests for enhancements/features, or requests for information. All feedback is valued by the Data Production Team and contributes to product improvements and enhanced value to users.

Your feedback will be emailed directly to the AsiaPac Data Production Team at [ozdata@mapinfo.com](mailto:ozdata@mapinfo.com), who will review and action it as soon as is practicable.

### Contact Preferences
