

StreetPro Australia v2014.10

StreetPro is Pitney Bowes Software's flagship street data product that offers comprehensive and current street centreline and address information suitable for a broad range of applications and services.

What's improved in this release?

- New Built-Up Areas (BUA) with more accurate boundary representation based on a combination of the Australian Bureau of Statistics Urban Centre Localities and Meshblock boundaries
- Addition of a second alias name field (ALIAS2) and components (ALIAS_NAME, ALIAS_TYPE, ALIAS_SUFFIX) to StreetPro Navigation and StreetPro streets, highways and main roads tables
- Apostrophes added to STREET, STREET_NAME, ALIAS, ALIAS_NAME, ALIAS2 and ALIAS_NAME2 fields in the streets, highways and main roads tables (eg O'REILLY ST)
- Points, nodes and vertices in all layers were subjected to a once-off rounding process and now have a maximum of 8 decimal places for the lat/long co-ordinate precision (previously there were up to 16 decimal places). This equates to a sub-millimetre shift at scale for around 250,000 street segments and nodes. Due to the large number of objects affected and relatively small size of the shifts, they are not shown in the ChangeLog and Incremental tables. ChangeLog and Incremental tables of the rounded objects can be supplied upon request to ozdata@mapinfo.com
- Label field added to all contextual tables for map display purposes

Addresses:

- Over **17,881 km** of address ranges added or updated.

Road Network:

- Updates to the Major Roads and Highways include:
 - **NSW:** Hunter Expressway has been upgraded from proposed
 - **WA:** Updates to main roads relating to the Gateway WA project
 - **SA:** Southern Expressway and Dukes Highway alignment and interchange upgrades based on field capture.
 - **QLD:** Alignment changes based on field capture to the Bruce Hwy around the Sunshine Coast and to the Warrego Hwy.
- **67,300 km** of new and updated roads.
- **628 km** of additional Freeways and Highways (Road Types 300,301).
- **738 km** of additional main roads.
- **1,203km** of additional connector roads.
- **180,792** individual inserts, updates and deletes to the road network.

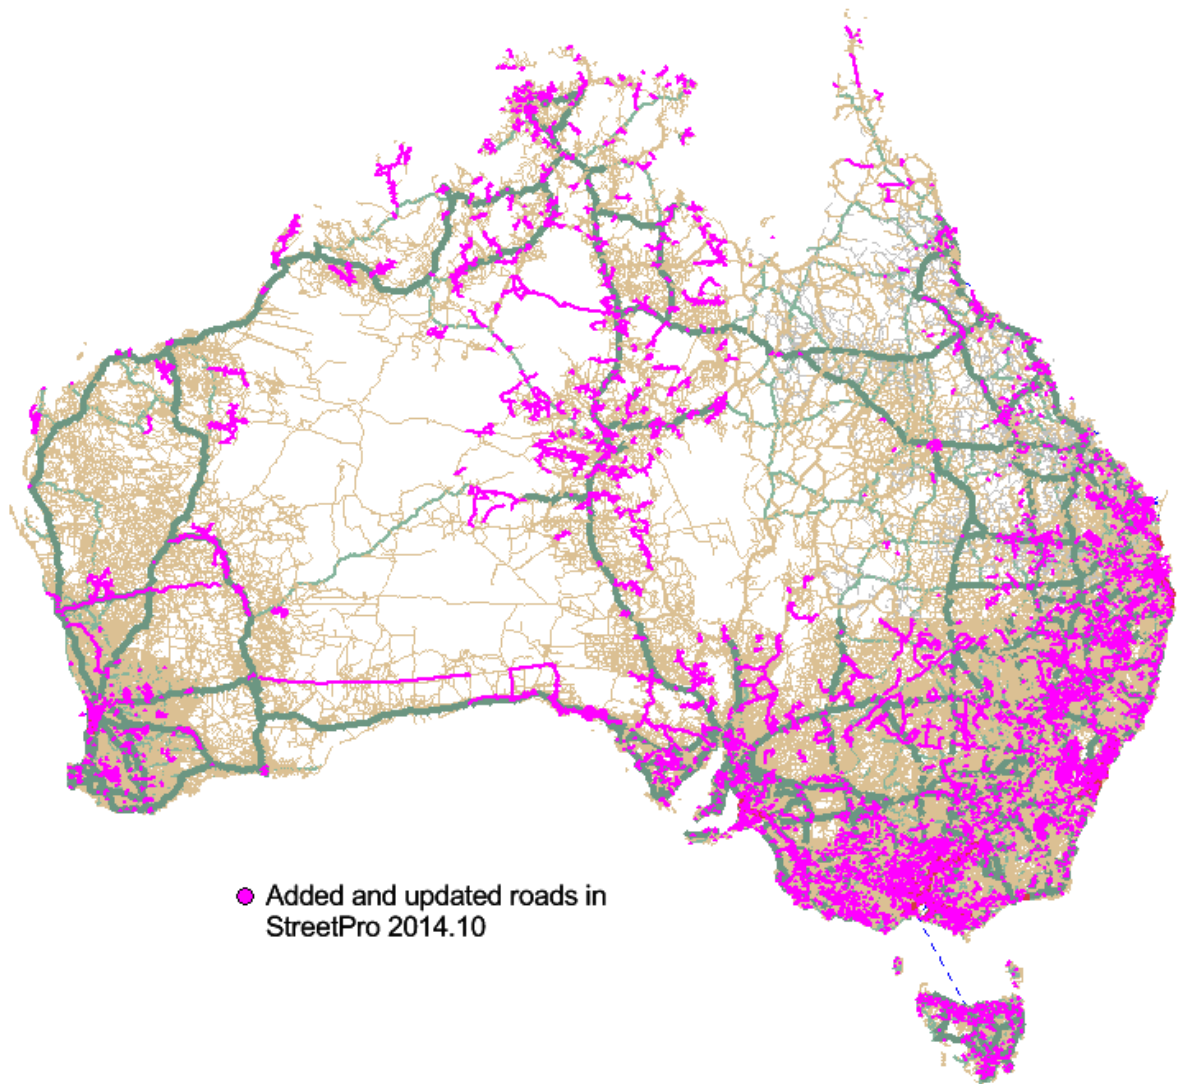

Layer Changes:

- 911 changes to Land Use
- 2,403 changes to Railway Stations
- 11,846 changes to Railway lines
- 737 changes to Features
- 1,263 changes to Parks

Data Feedback Program

- 69,694 individual updates and corrections based on customer feedback outside of the PSMA supply, from clients including Transport for NSW.

Summary of Road Network Changes

StreetPro: The Enhanced Value

- StreetPro is engineered with spatial display, analysis and business integration in mind.
- The advanced content for Australia found in our product has been obtained from a variety of sources, including PSMA Australia, client feedback, significant field capture and stringent verification programs.
- Pitney Bowes Software's data development team employs a rigorous quality control process, which ensures the highest quality street data is available to our customers.

Data Feedback

As part of our continuous quality improvement program, Pitney Bowes Software actively requests feedback from customers to report any anomalies or changes, or to request future enhancements to our products.

The feedback that we receive from our customers is vital to the continual quality development of our data products.
