Summary

The World StreetPro data product offers intermediate level mapping solution for the World with over 19 layers of information. It includes roads, railways, international and administrative boundaries, urban areas, coastlines, waterbodies, landcovers, gazetteers, airports, stations, ferries and railways. The worldwide data coverage is available in a consistent specification and data model.

Workspace

To help users get up and running quickly, Pitney Bowes provide workspace files that are optimized to show the data at multiple zoom levels. Where supplied, these workspaces use the following naming conventions:

WOR files for use with MapInfo Professional (**world_streetpro_continent-name*.wor**), or MWS files for use with Mapxtreme and Spectrum Spatial (**world_streetpro_continent-name*.mws**).

*continent-name: Africa, Asia, Europe, North America or South America.

For country level data cut, country three letter ISO3 code is added to the workspace nomenclature mentioned above
