# Chapter 1: Introduction

Welcome to the product guide for MI RouteFinder Networks. This chapter provides an overview of the product, the documentation, and how to contact us.

Following [Chapter 2: Getting Started on page 8](#), the information relating to the product's file sets is given in [Chapter 3: Database Description on page 11](#), which will be of particular use if you have the Editable version of MI RouteFinder Networks.

The guide assumes that you are familiar with your MapInfo RouteFinder software. For information about MapInfo RouteFinder, consult the RouteFinder documentation set.

## In this chapter:

- ♦ [Overview . . . . .7](#)
- ♦ [Contacting Technical Support . . . . .7](#)

## Overview

MI RouteFinder Networks comprise digital road networks at a nominal 1:10 000 scale, with a link structure. The networks include motorways, principal highways, important regional and local roads, other roads and ferries.

Pitney Bowes Software has enhanced the networks by including the signposted travel speeds, weight limits (where available), and other road and area attributes for each road link. The networks were developed for use with MapInfo RouteFinder 5 software.

## Contacting Technical Support

In the unlikely event that you encounter problems working with MI RouteFinder Networks, our technical support specialists can help - refer to [Further Information on page 4](#).

Technical support for MI RouteFinder Networks includes referrals to documentation, assistance with error messages and suggestions for causes of error messages.

A Technical Support contract can be obtained through your sales representative.

## Chapter 2: Getting Started

This chapter explains the file names used, and provides you with instructions for installing the data.

### In this chapter:

- ♦ [File Names](#) .....9
- ♦ [Installing MI RouteFinder Networks](#) .....10

## File Names

MI RouteFinder Networks includes the following file sets:

- **Links:** These Mapinfo format-mappable sets are used for network editing and display.
- Other essential files (.bin, .spd and .ini files): These files are all required for the successful running of the software with a network.

**Note** In order to use the data correctly, you must have access to all of the files in the file set. All the files for each file set must be located in the same directory.

## Links

The Links file sets contain five different file types:

| Filename         |                   | File Type           |
|------------------|-------------------|---------------------|
| Standard Network | Premium Network   |                     |
| xxx_links.DAT    | xxx_links_pro.DAT | Data file           |
| xxx_links.ID     | xxx_links_pro.ID  | Identification file |
| xxx_links.IND    | xxx_links_pro.IND | Index file          |
| xxx_links.MAP    | xxx_links_pro.MAP | Map file            |
| xxx_links.TAB    | xxx_links_pro.TAB | Tabular file        |

In the above table, xxx represents the country / group three-letter code:

| Three Letter Code | Country / Group               | Three Letter Code | Country / Group                     |
|-------------------|-------------------------------|-------------------|-------------------------------------|
| AUT               | Austria                       | ITA               | Italy, Vatican City, and San Marino |
| BEL               | Belgium and Luxembourg        | NLD               | The Netherlands                     |
| CHE               | Switzerland & Lichtenstein    | NOR               | Norway                              |
| DEU               | Germany                       | SWE               | Sweden                              |
| DNK               | Denmark                       | FIN               | Finland                             |
| FRA               | France                        | GBR               | United Kingdom                      |
| ESP               | Spain, Andorra, and Gibraltar | GBR_ITN           | ITN network for the United Kingdom  |
| AUS*              | Australia                     | SGP               | Singapore                           |
| MYS               | Malaysia                      | CHN               | China                               |

| Three Letter Code | Country / Group            | Three Letter Code | Country / Group  |
|-------------------|----------------------------|-------------------|--|
| KWT               | Kuwait                     | HUN               | Hungary  |
| OMN               | Oman                       | IND               | India  |
| QAT               | Qatar                      | SRB               | Serbia   |
| SAU               | Saudi Arabia               | UAE               | United Arab Emirates                                       |
| Eire_NI           | Ireland & Northern Ireland | BRIT_ISLE         | British Isles (Great Britain & Ireland & Northern Ireland) |

\* State networks are available for these countries.

#Region specific networks are available for USA viz. Central, Pacific, South, Central and Northeast and hence nomenclature differ from rest of the world i.e. `USA_RegionName_links` (Standard)  
`USA_RegionName_links_Pro` (Premium)

## Installing MI RouteFinder Networks

**Note** Make sure that you choose a disk with enough space.

1. Locate the **install** executable file (install.exe) and double-click it.
2. The MapInfo MI RouteFinder Networks Installer dialog box opens. Click **Next**.
3. Accept the License Agreement by selecting **I accept the terms of the License Agreement** radio button.
4. Click **Next**.
5. Click **Choose** to select a folder where you want to install the MI RouteFinder Networks. Also choose where would you like to create product icons by selecting the appropriate radio button. If you do not want to create product icons, select the **Don't create icons** radio button.
6. If you want to create icons for all the users, select the **Create Icons for All Users** check box.
7. Click **Next** to review the disk space availability and other selections.
8. Click **Install**.
9. Click **Done** once the installation process is complete.

# Chapter 3: Database Description

This chapter describes the spatial referencing, display characteristics, and table structure, of the MI RouteFinder Networks.

## In this chapter:

- ♦ [Spatial Referencing . . . . .12](#)
- ♦ [Display Characteristics and Table Structures . . . . .12](#)

## Spatial Referencing

The database for MI RouteFinder Networks uses, by default, the projection and coordinates given below:

|                          |   |
|--------------------------|---|
| <b>Coordinate System</b> | Longitude/Latitude(WGS84)<br>Longitude/Latitude(GDA94) (Australia only) |
| <b>Coordinate Units</b>  | Decimal Degrees   |
| <b>Projection</b>        | Longitude/Latitude  |

## Display Characteristics and Table Structures

### Links

The Links table contains road and ferry links.

#### Table Structure - Standard Network

| Field      | Description   | Type (Width)  | Indexed |
|------------|---|---------------|---------|
| Street1    | Official Street name  | Char(*)       | No      |
| Street2    | Alternate Street name \ Official Street name in Local Language                  | Char(*)       | No      |
| Street3^   | Alternate Street name 2 \ Official Street name in second Local Language         | Char(*)       | No      |
| Street4^   | Alternate Street name 3 \ Official Street name in third Local Language          | Char(*)       | No      |
| Attribute  | Routefinder Road Class value  | Small Integer | No      |
| Avoid      | RouteFinder Avoid columns sum values  | Small Integer | No      |
| Road_class | Road classification code (please refer to Road_class Specification table below) | Char(2)       | No      |
| Area_type  | Code representing the Area type   | Small Integer | No      |
| FeatureID  | Unique Feature Identifier   | Char(17)      | Yes     |
| Speed      | Speed limit for the segment   | Integer       | No      |
| Start_Z    | Value indicating the z-level at the start of the segment                        | Small Integer | No      |
| End_Z      | Value indicating the z-level at the end of the segment                          | Small Integer | No      |

| Field  | Description                             | Type (Width)  | Indexed |
|--------|---|---------------|---------|
| Avoid1 | Pedestrian values only (1)              | Small Integer | No      |
| Avoid2 | Vehicle values only (2)                 | Small Integer | No      |
| Avoid3 | Toll Roads values only (4)              | Small Integer | No      |
| Avoid4 | Motorways values only (8)               | Small Integer | No      |
| Avoid5 | Ferries values only (16)                | Small Integer | No      |
| Avoid6 | Tunnel values only (32)                 | Small Integer | No      |
| Avoid7 | Four Wheel Drive (4WD) values only (64) | Small Integer | No      |
| Avoid8 | Bridges values only (128)               | Small Integer | No      |

^ Country specific

**Table Structure - Premium Network**

| Field         | Description   | Type (Width)  | Indexed |
|---------------|---|---------------|---------|
| Street1       | Official Street name  | Char(*)       | No      |
| Street2       | Alternate Street name \ Official Street name in Local Language                  | Char(*)       | No      |
| Street3^      | Alternate Street name 2 \ Official Street name in second Local Language         | Char(*)       | No      |
| Street4^      | Alternate Street name 3 \ Official Street name in third Local Language          | Char(*)       | No      |

| Avoid         | RouteFinder Avoid columns (Avoid1 to 8) sum values                              | Small Integer | No      |
| Road_class    | Road classification code (please refer to Road_class Specification table below) | Char(2)       | No      |
| Area_type     | Code representing the Area type   | Small Integer | No      |
| FeatureID     | Unique Feature Identifier   | Char(17)      | Yes     |
| Speed         | Speed limit for the segment   | Integer       | No      |
| Speed_AMPeak* | Average speed along segment during AM Peak times                                | Integer       | No      |
| Speed_PMPeak* | Average speed along segment during PM Peak times                                | Integer       | No      |

## Display Characteristics and Table Structures

| Field            | Description  | Type (Width)  | Indexed |
|------------------|--|---------------|---------|
| Speed_InterPeak* | Time between end of AM Peak and beginning of PM Peak     | Integer       | No      |
| Speed_Night*     | Average speed for Night                                  | Integer       | No      |
| Speed_SevenDay*  | Average speed of complete week                           | Integer       | No      |
| Start_Z          | Value indicating the z-level at the start of the segment | Small Integer | No      |
| End_Z            | Value indicating the z-level at the end of the segment   | Small Integer | No      |
| Max_Height       | Maximum Vehicle Height allowed along the segment         | Small Integer | No      |
| Max_Width        | Maximum Vehicle Width allowed along the segment          | Small Integer | No      |
| Max_Weight       | Maximum Vehicle Weight allowed along the segment         | Small Integer | No      |
| Avoid1           | Pedestrian values only (1)                               | Small Integer | No      |
| Avoid2           | Vehicle values only (2)                                  | Small Integer | No      |
| Avoid3           | Toll Roads values only (4)                               | Small Integer | No      |
| Avoid4           | Motorways values only (8)                                | Small Integer | No      |
| Avoid5           | Ferries values only (16)                                 | Small Integer | No      |
| Avoid6           | Tunnel values only (32)                                  | Small Integer | No      |
| Avoid7           | Four Wheel Drive (4WD) values only (64)                  | Small Integer | No      |
| Avoid8           | Bridges values only (128)                                | Small Integer | No      |

^ Country specific

\* Speed Profile data, all fields may not be available

**Note** The Table Structure may vary from country to country due to extra reference fields but all of the key fields listed above will be present.

The value quoted in the Speed column is derived differently depending on the Country and the source data provider. For any country built from the TomTom source data, the Speed value is the same as the value quoted in the source data. For New Zealand and Japan, the Speed value is equal to the sign-posted speed limit along the segment. For Australia, the Speed value is a combination of sign-posted speed limits and modelled speeds (based on data captured during field verification). For other countries, the Speed value is a modelled speed.

### Area Type Classification

There are different Area\_Type classifications used globally and the table below details the Area Type values that are available within the networks and the classifications they represent.

| Code                       | Description   |
|----------------------------|---|
| <b>TomTom Source Data</b>  |   |
| 0                          | Area classed as Rural                                   |
| 1                          | Area classed as Urban                                   |
| <b>Partner Source Data</b> |   |
| 1                          | Area classed as Dense Urban \ Central Business District |
| 2                          | Area classed as Urban                                   |
| 3                          | Area classed as Rural Urban                             |
| 4                          | Area classed as Rural                                   |

### Road\_class Classifications

Similar to the Area\_Type, there is different Road\_class classifications dependant on the source data used to build the network. The tables below details the Road\_class codes, the Features that the codes represent, and the graphic object details.

#### Display Characteristics

The first table is for networks built using the TomTom source data.

| Feature               | Road Classification    | Graphic Object Details   |   |
|-----------------------|------------------------|--|---|
| Motorway              | M (non-toll), N (toll) |  | Red, medium polyline Pen (3,2,16711680) |
| Major Road            | I (non-toll), G (toll) |  | Red, medium polyline Pen (3,2,16711680) |
| Other Major Road      | P (non-toll), Q (toll) |  | Red polyline Pen (2,2,16711680)         |
| Secondary Road        | S (non-toll), T (toll) |  | Dark yellow polyline Pen (2,2,15790080) |
| Local Connecting Road | C (non-toll), F (toll) |  | Saddle polyline Pen(30,130,14401683)    |

**Display Characteristics and Table Structures**

| Feature                     | Road Classification    | Graphic Object Details  |   |
|-----------------------------|------------------------|---|---|
| Local (Important) Road      | L (non-toll), W (toll) |  | Saddle polyline<br>Pen(30,130,14401683) |
| Local Road                  | D (non-toll), E (toll) |  | Saddle polyline<br>Pen(30,130,14401683) |
| Local (Minor) Road          | R (non-toll), A (toll) |  | Saddle polyline<br>Pen(30,130,14401683) |
| Other Road                  | U (non-toll), V (toll) |  | Saddle polyline<br>Pen(30,130,14401683) |
| Limited Access/Private Road | Z                      |  | Pen (1,5,16744448)                      |
| Ferry                       | H                      |  | Blue, dashed polyline Pen (1,9,255)     |
| Pedestrian                  | Z                      |  | Pen (1,5,16744448)                      |

The second table is for networks built using source data from Data Partners.

| Feature   | Road Classification    | Graphic Object Details   |   |
|-----------|------------------------|--|---|
| Motorway  | A (non-toll), B (toll) | Standard<br><br>Tunnel<br> | Pen (40,130,1377980)<br>Pen (1,68,1377980) (Tunnel) |
| Highway   | C (non-toll), D (toll) | Standard<br><br>Tunnel<br> | Pen (40,130,7116418)<br>Pen (1,68,7116418) (Tunnel) |
| Main Road | G (non-toll), H (toll) | Standard<br><br>Tunnel<br> | Pen (30,130,8762781)<br>Pen (1,68,8762781) (Tunnel) |

| Feature                        | Road Classification    | Graphic Object Details  |   |
|--------------------------------|------------------------|---|---|
| Connector Road                 | I (non-toll), J (toll) | Standard<br>   | Pen (30,130,14401683)<br>Pen (1,68,15518117) (Tunnel) |
|                                |                        | Tunnel<br>     |   |
| Local Road                     | K (non-toll), L (toll) | Standard<br>   | Pen (1,2,14401683)<br>Pen (1,68,15518117) (Tunnel)    |
|                                |                        | Tunnel<br>     |   |
| Minor Road                     | M                      | Standard<br>   | Pen (1,5,16744448)                                    |
| Four Wheel Drive Track         | N                      | Standard<br>  | Pen (1,12,14401683)                                   |
| Limited Access                 | E                      | Standard<br> | Pen (1,2,14401683)                                    |
| Restricted Access              | PR                     | Standard<br> | Pen (1,2,14401683)                                    |
| Intersection Construction Line | X                      | Standard  | Invisible unless selected – Pen (1,1,0)               |
| Passenger Ferry                | Q                      | Standard  | Pen (1,9,255)   |
| Vehicle Ferry                  | F                      |              |   |
| Pedestrian                     | P                      | Standard<br> | Pen (1,3,14401683)                                    |

# A

## Appendix A: Notes

### Opening Multiple RouteFinder Networks

It is not possible to open more than one MapInfo RouteFinder network at a time.

### Maximum Height, Weight, and Width

Maximum limits for vehicle height, weight, and width can be specified for each link using the relevant fields within the network. A value of zero in these fields equates to No Limit specified. The maximum values that can be set are 25m for both Height and Width, and 100 tonnes for Weight. The limits for the Height, Weight, and Width can be set to 0.1 of the respective unit.

The values displayed in these fields will be the limit multiplied by 10. For example, if the segment has a Height limit of 3.2m, the value displayed in the Height\_limit field will be 32.
